

ACTIVATE · SIMPLIFY · TRANSFORM

NUITEQ Snowflake is the educational software that brings interactivity to your school and increases collaboration in the classroom and a remote learning setting.

Designed to empower **Smarter Human Interaction**, Snowflake **helps students** gain the skills needed for future jobs and **empowers teachers** with curriculum-aligned teaching resources.

ACTIVATE

Activate students for greater engagement and collaboration.

Fun content: use relevant content to quickly create curriculum-aligned learning activities and provide multiple means of representation and expression (e.g. images, video, audio) that support students in their learning quest. Send homework worth doing that will keep students engaged.

Engaged learning: providing multiple Zones on one screen enables individual and collaborative workspaces. This transforms your interactive screen from a front of classroom display into a fun, **engaging learning station**. For remote learning, it allows students to reflect and actively solve problems.

SIMPLIFY

Simplify teaching with engaging and relevant content accessible at all times.

Easy-to-use interface: search and find ready-made activities or create and distribute your own within minutes.

Save lesson planning time: access a vast content library containing curriculum-aligned lesson activities created by teachers for teachers.

Personalized learning: use ready-made relevant content to personalize the learning path of each individual student.

Differentiate instruction: display information in a flexible format based on students' learning styles and needs.

Accessible: building on our commitment to Universal Design for Learning, Snowflake incorporates Open Dyslexic font, voice recording, and more to support a wide range of students.

Free training: learn how to use Snowflake efficiently with training videos available for free 24/7 at training.nuiteq.com.

TRANSFORM

Move from teacher-oriented to student-centered learning. Increase collaboration and engagement to improve student results.

Engage students with relevant content: access free lesson activities, created using the means of learning that students use in their daily life such as videos and digital resources.

Student voice: the ability for students to produce activities in a variety of formats or answer a Poll sent by the teacher, anonymously, anytime, from anywhere.

FOR TEACHERS

- Content made by teachers for teachers
- Personalized learning
- Differentiated instruction
- Project-based learning
- Flipped classrooms
- Online or offline
- BYOD: Chromebooks, laptops, tablets, smartphones.

FOR IT ADMINS

Deployment made simple.

Simple bulk licensing

Updates: announced on the NUITEQ blog. No subscription required.

Desktop and cloud version: Snowflake desktop is installed on interactive displays; it works offline and can load videos shared on a local network. The cloud version is accessed online via a browser on any device.

Compatible: with Google Classroom, it saves teachers' time while creating a new class.

FOR POLICYMAKERS

The right tools for your needs.

Global content department: Don't limit the adoption of technology because of the need to create all-new content. Snowflake comes loaded with curriculum-aligned active learning materials that can be used immediately.

Multiple means of engagement: lesson activities that can be personalized and contextualized to a student's life. Snowflake activities allow collaboration and foster the use of creativity to solve real-world problems.
