Security Assessment
Simplify and Fortify Security with Microsoft Cloud Security Solutions

The Problem

In today's ever-changing cloud environment, effective security is one of the most important factors in a business. It is crucial to make sure that your information, users, applications, data, and other cloud components are secured. However, with fast agile development cycles, it is becoming increasingly difficult to make sure adequate controls are in place, proper configurations are done, and staff is sufficiently trained to support the needs of the business. A recent (ISC)[2] study shows that 94% of the organizations polled are moderately to extremely concerned about cloud security and some of their biggest concerns are data loss and data privacy.
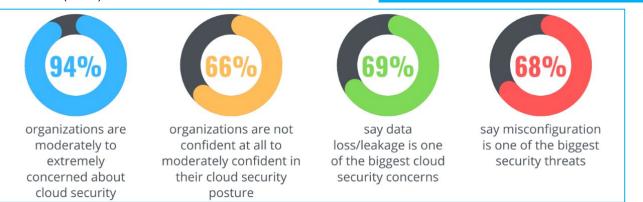

The Solution

Spyglass's Security Assessment captures your current security state and documents a plan to safeguard your entire organization with Microsoft's integrated security, compliance, and identity solutions built to work across cloud platforms and environments. The focus of the assessment is to determine specific configurations, architectures, and solutions that will maximize return on investment from already purchased products and meet the unique use cases and requirements needed to conduct business securely. While many assessments are rigid in their recommendations, the Spyglass methodology allows for recommendations to be tailored to the specific requirements and use cases currently in place as well as the future needs of the company. Recommendations made are aligned to the Cloud Security Alliance (CSA) Cloud Controls Matrix (CCM).

Approach

- Discovery Sessions across the following security domains:
    - Governance & Compliance
    - Identity & Access Management
    - Architecture
    - Data Protection
    - Business Continuity
    - Threat Protection
    - Incident Response
    - Application Security

- Configuration review of cloud environment

Program Deliverables

- Recommendations Document -including prioritized list of recommendations aligned with the CSA CCM and remediation steps

- Remediation Roadmap based on a risk-based assessment

- Executive Summary Presentation

94% organizations are moderately to extremely concerned about cloud security

66% organizations are not confident at all to moderately confident in their cloud security posture

69% say data loss/leakage is one of the biggest cloud security concerns

68% say misconfiguration is one of the biggest security threats

Spyglass MTG Can Help!

We can help you safeguard your organization with integrated security. Contact us today!

About Spyglass MTG- A Women Owned/Women Led Company

For over 15 years, we've closely partnered with Microsoft to bring their vast and expanding suite of enterprise solutions to our clients. We leverage proven methodologies, migration tools and expert consultants to architect, build, deploy, migrate to, and manage Microsoft solutions. Whether you are deploying or upgrading M365, implementing Azure, deploying Teams, building a SharePoint Site, developing a Security or Governance Model, designing a Modern Warehouse or BI Solution, or developing AI apps on the Power Platform, we can help!
