The Intelligent Digital Assistant

Customers are getting younger, and are more digitally demanding. They're not very interested in visiting branches or calling customer care; a new engagement strategy is emerging and banks need to respond.

virtual engagement solutions tend to be single-turn, non-conversational, and quite frankly, basic. They don't satisfy customers' desire to be treated as a person. Is there a solution?

Enter the intelligent digital assistant.

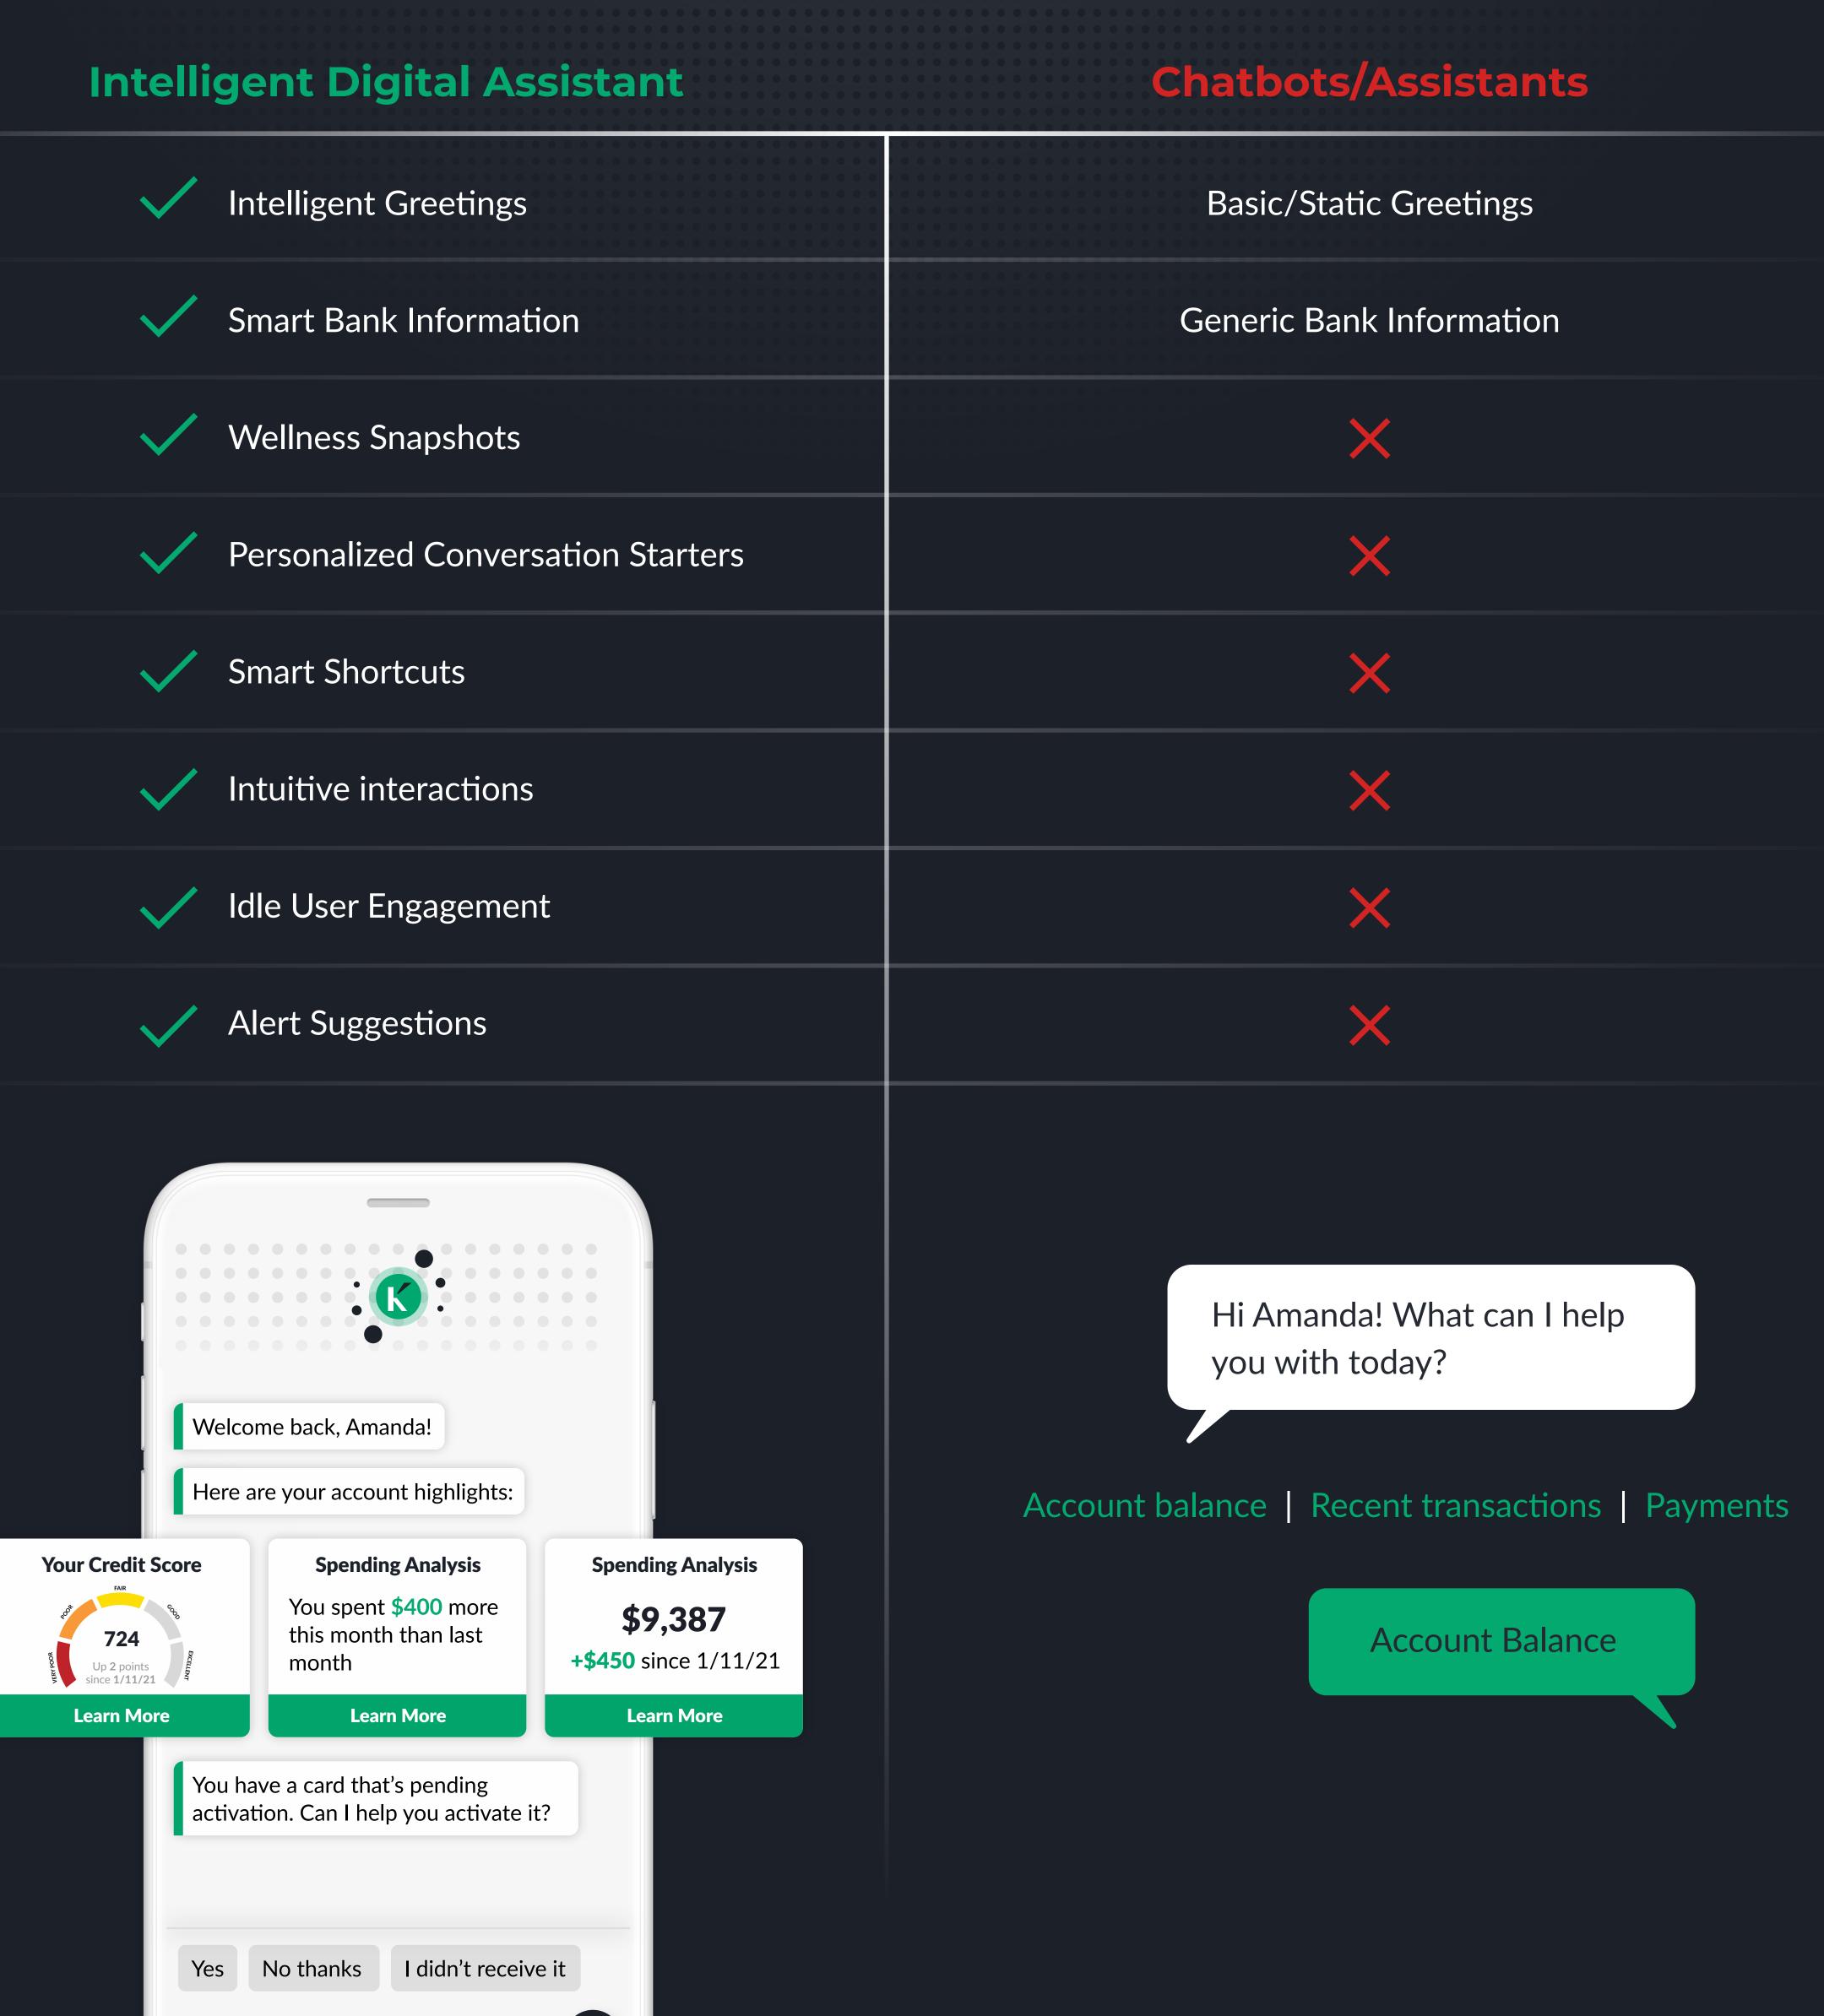

Initially, chatbots surfaced as the answer, but many banks came to realize that most chatbots or other

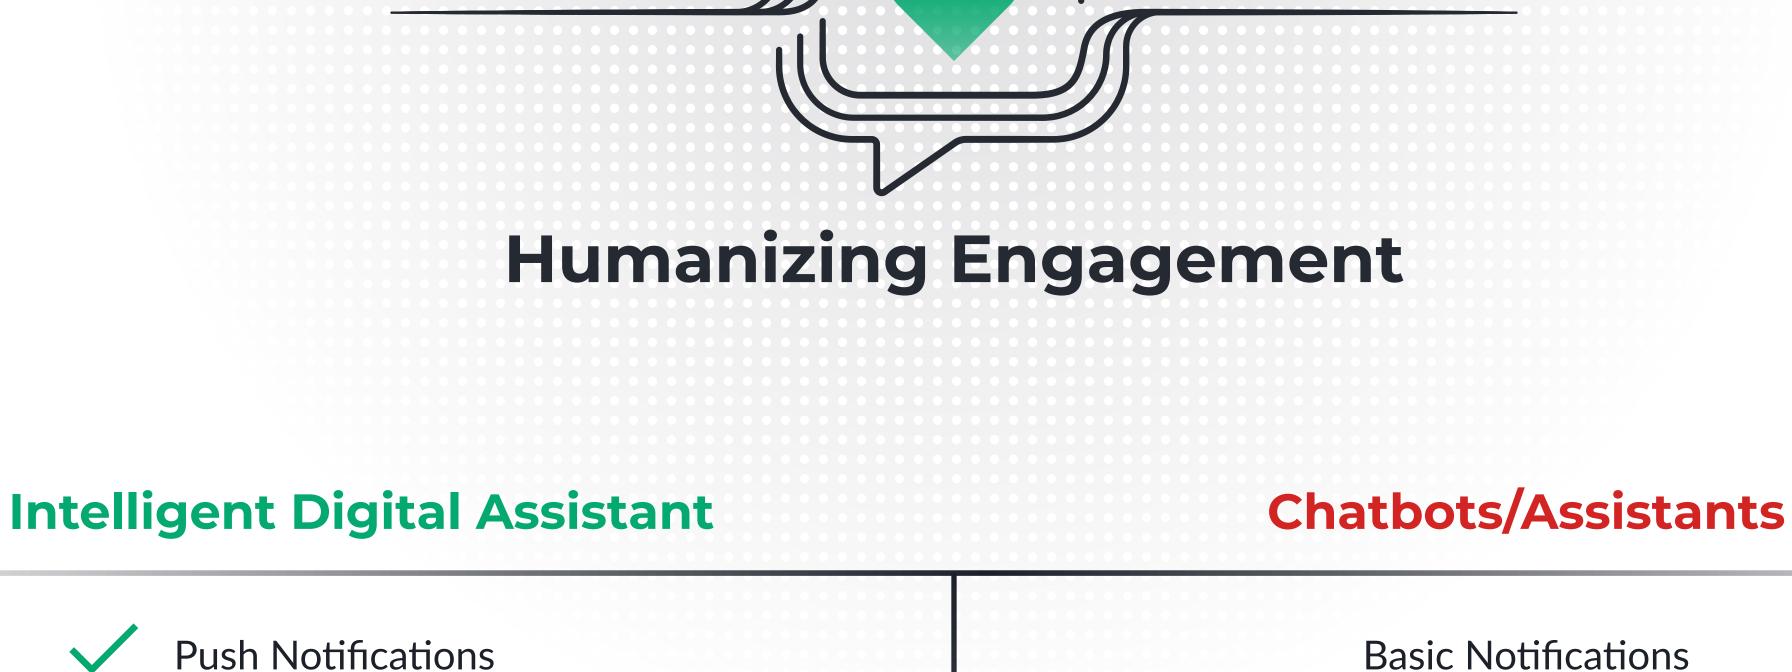

The intelligent digital assistant delivers intuitive, personalized service, and develops meaningful cus-

tomer relationships at scale – all without the need for face-to-face interactions.

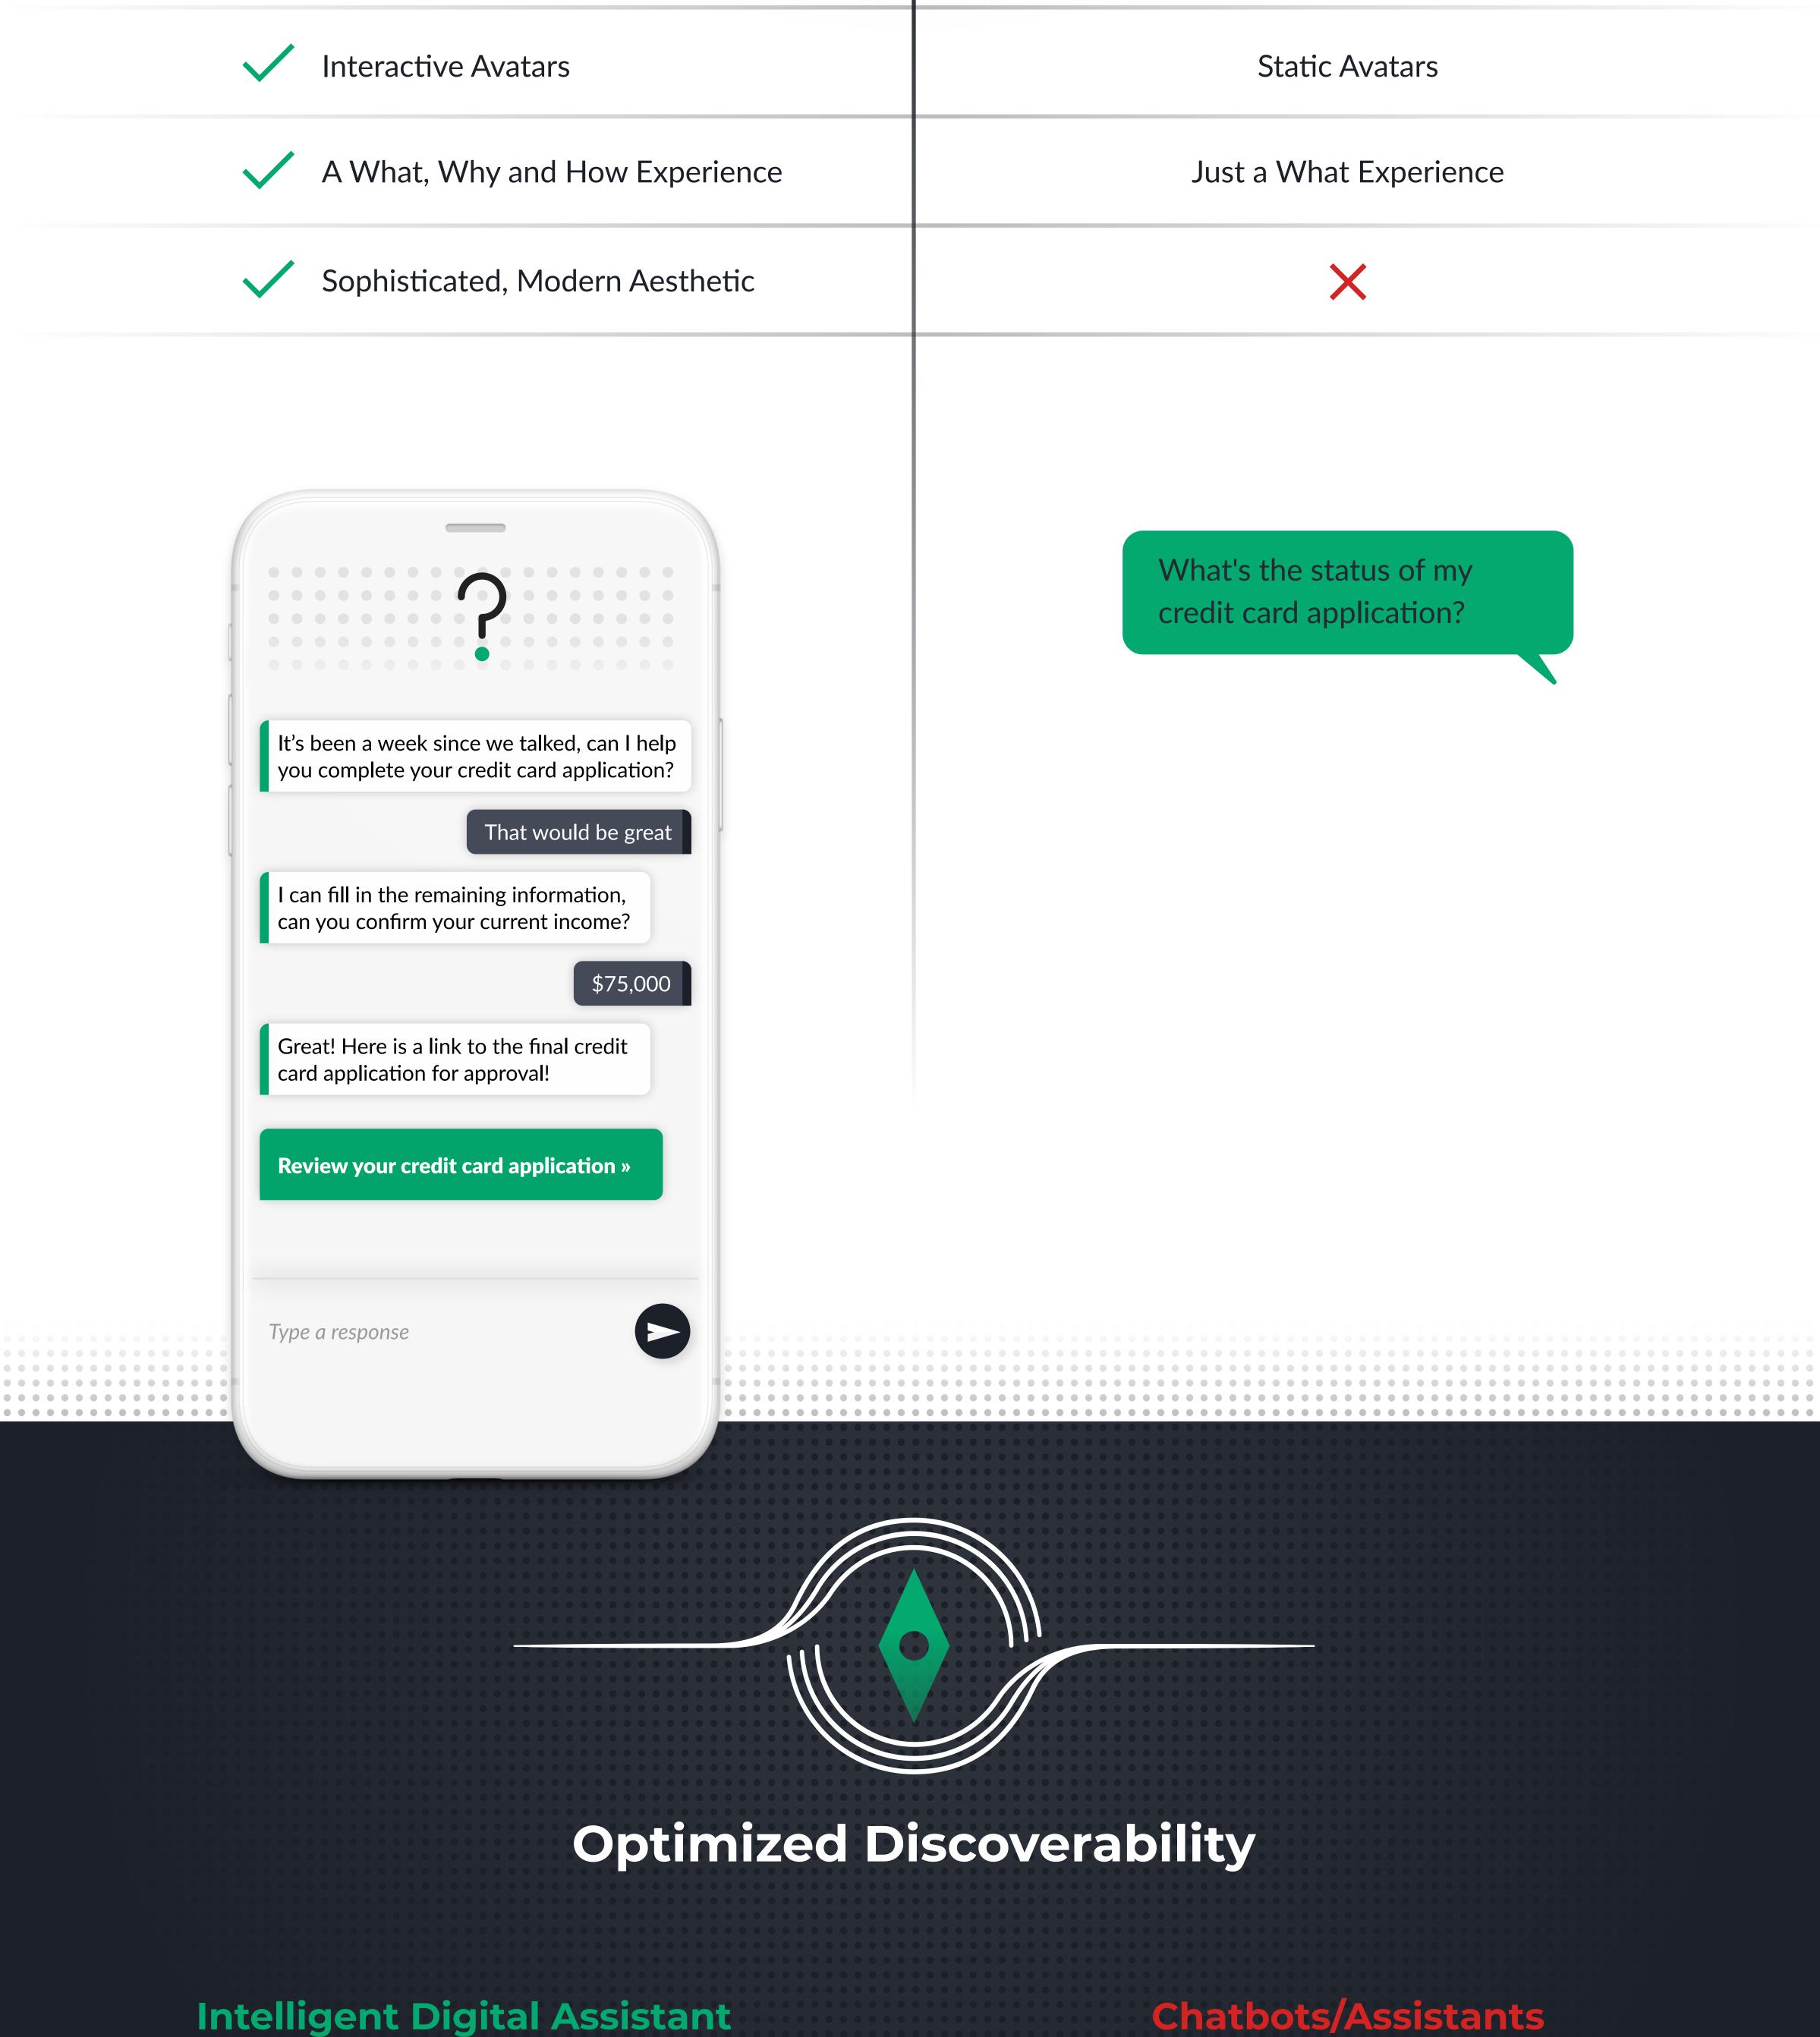

Let's dive deeper into what this solution offers and why it stands above the rest.
