

# Employee Onboarding & Offboarding Business Process Automation for ADP

**Automated employee provisioning and deprovisioning from ADP data across applications for improved employee onboarding, scalable HR operations, and reduced risk.**

## Provisioning of Multiple Applications Using a Single Automation

Celigo is the only iPaaS that automates the employee provisioning and deprovisioning from ADP data across multiple business applications within a single product. This ensures data consistency while improving the employee onboarding experience, reducing costs, and making HR operations more scalable.

## HR Best Practices Built In

Celigo's unique Embedded Business Logic automatically employs HR best practices based on each application's recommended use case. This makes your provisioning and deprovisioning processes the best it can be.

## Accelerated Time to Productivity

Automated onboarding ensures employees have immediate access to all the tools they need, accelerating new-hire productivity while reducing administrative HR costs.

## Timely and Secure Offboarding

Celigo makes it easy to deprovision employees from applications in a timely manner to avoid risk of unintended access and business disruption.

## From Start to Production in Fewer than 6 Steps

New applications can be added to your process in minutes. Either HR teams or IT can complete the whole set up in fewer than 6 steps -- no coding or technical expertise required.

## How Celigo and ADP Work Together

Hundreds of prebuilt and universal connectors

Additional endpoints require further customization

Preconfigured applications

Create employee records  
Deactivate employee records

# One Business Process Automation for accurate employee data across all applications.

## Key Features

- ✓ **Guided User Interface**  
Celigo's Business Process Automation guides you through the intuitive, no-code steps of the implementation process from start to finish.
- ✓ **Advanced Integration Monitoring**  
A unified dashboard provides full visibility into the status of integration flows and source of any errors for easy troubleshooting.
- ✓ **Popular Application Integrations Out-of-the-Box**  
Common applications such as Salesforce, Okta, Zendesk, NetSuite, GitHub, SAP Concur, SAP Litmos, Servicenow, Azure Active Directory can be quickly added into the provisioning/deprovisioning workflows as needed.
- ✓ **AI-Based Error Management**  
Error handling with AI/Machine Learning reduces time spent managing provisioning errors by 2–6 hours a week.
- ✓ **ADP Connection Types**  
Supports both API and FTP connections to ADP for maximum flexibility.
- ✓ **Fully Customizable and Extensible**  
Through the power of the Celigo Integration Platform, all flows are fully customizable to match your unique business needs. Additional integrations can be built to automate other use cases and business processes across the organization.
- ✓ **Security & Compliance**  
Celigo is CCPA and GDPR ready. SOC2 Type 1 and Type 2 Certifications available for data compliance. Employee PII security is assured by encrypting data in motion and at rest.

The image displays two screenshots of the Celigo integration platform. The top screenshot shows the 'Connections' page for 'Hire to Retire - ADP'. It features a table of connections with columns for Name, Status, Type, API, Last updated, Queue size, and Actions. The connections listed are ADP Workforce Now connection, GitHub connection, NetSuite Connection, and Zendesk connection, all with an 'Online' status.

The bottom screenshot shows a workflow builder for 'Deprovision user access from ADP'. The workflow consists of four steps: 1. 'Export' from ADP (Source), 2. 'Lookup user id in Zendesk' (Destination & Lookup), 3. 'Get tickets in Zendesk' (Destination & Lookup), and 4. 'Reassign tickets in Zendesk' (Destination & Lookup). Below the workflow is a 'Run console' table with columns for Step, Status, Success, Ignored, Errors, Resolved, Pages, Duration, and Completed.
