DEMONSTRATE COMPLIANCE WITH RISK MANAGEMENT

MANAGEMENT

With more than €65 million in fines already imposed for insufficient technical and organisational measures to ensure information security, identification and reduction of risk needs to be at the centre of your data privacy program. PrivacyEngine enables data privacy teams to quickly identify potential problems, and to cooperate across the organisation to fix the issues. We know where to look for risks and include more than 1000 scenarios in our risk management engine to short-circuit the process for you.

Features:

- PrivacyEngine's Risk management tool-kit enables your organisation to identify and mitigate against data protection risks, as well as demonstrate compliance in the event of a regulatory investigation or audit.

- The solution incorporates our register of known and common risks, including:
  - A Red, Amber, Green (RAG) rating matrix to give you a complete view of the risk profile of your organisation.

  - Timeline reporting to track the historical risk profile of your organisation.

  - A table which lists all the risks identified and added to your organisation; containing a risk description, where the risk originated, the date created, status, rating and any actions assigned to team members for risk mitigation.

Benefits:

- Streamline data protection compliance and management with a risk-based approach.

- Promote a culture of trust across your organisation, with customers, partners, and other stakeholders.

- Save time and money by automatically identifying risks through the "Records of Processing Activities", and "Assessments" features and leveraging the risk library.

- Proactively identify and address data protection risks, to improve data governance and data quality.

Using PrivacyEngine's risk management toolkit, organisations quickly identify and mitigate against data protection risk. It enables implementation of best practice risk-based data protection management processes from planning to assessments and implementation. Quickly identify problem areas for rapid resolution and leverage your nominated staff and teams within your organisation to undertake actions that reduce their likelihood, severity and mitigate non-compliance across your privacy program. All the while, you're providing a detailed evidence trail of your compliance.
