ASSESSMENTS – STREAMLINE DATA PROTECTION IMPACT ASSESSMENTS (DPIA'S) & REPORTING

Every time you embark on a new project that processes high risk & high-volume personal data; you need to complete a full Data Protection Impact Assessment (DPIA). PrivacyEngine's Assessment module automatically flags data protection risks associated with data processing activities and provides recommendations for speedy remediation. The technology enables organizations to cut the time it takes to conduct fully compliant DPIAs and executive assessments by up to 50%, resulting in faster project implementation and shorter time to value.

Features:

- Easy-to-use module for completing collaborative workshop-based DPIAs.
- Risk identification, rating and gap analysis.
- Automated reporting.

Benefits:

- Reduce the time it takes to perform mandatory DPIAs by up to 50%.
- Quickly identify and mitigate data protection-related risks.
- Reduce operational costs by optimising information flows and eliminating unnecessary data collection, storage and processing.
- Enable your teams to make informed decisions about the acceptability of data protection risks.

Under the General Data Protection Regulation (GDPR), it is mandatory to conduct a DPIA before implementing so-called high-risk processing projects. Conducting a DPIA using PrivacyEngine helps to improve project design and enhance understanding and communication of data privacy risks with relevant stakeholders. The PrivacyEngine DPIA process supports "data protection by design," to significantly reduce data protection related risks to your organisation.
