

Cloud Hosting

Reliable Custom Cloud Hosting

Lunavi provides VMware cloud hosting from data centers across the United States, with PAYG or allocation subscriptions and public, hybrid, or private configurations that are built to meet each client's individual infrastructure requirements.

Our VMware-based cloud platform is a cost-effective, scalable, and customizable infrastructure solution. Whether you choose a self-service or managed cloud, your company will take advantage of a robust cloud environment that is completely secure, with full redundancy.

Cloud hosting includes online management, choice of operating system, on-demand resource allocation, and simple system migration. It also offers many of the capabilities of dedicated IP addresses, but with higher reliability, greater flexibility, and a lower total cost of ownership.

Complimentary Monitoring Tools

Get insight into resource utilization, networks, attached devices, and more without being charged a premium for monitoring software. The Lunavi customer portal and separate cloud monitoring tools provide the performance statistics administrators need.

Hear from a Human Support

We guarantee that every support ticket receives a response within 15 minutes or less. Every cloud hosting, contract includes free 24/7/365 proactive service from expert technical staff. On average, nearly 30% of tickets are opened by this team before the customer is aware of an issue.

“
A company like ours depends on the service 100% of the time - we did everything humanly possible to figure out the best possible partner.”
ARMUS

Cloud Hosting

Greener Hosting

Energy efficient facilities help reduce costs while maintaining true scalability, offering a simplified IT environment and ensuring performance on Energy Star hardware.

Speed and Availability

Lunavi's nationwide cloud is ideal for location-specific workloads and performance or privacy-sensitive applications.

Unlimited Scalability

All resources can be grown based on immediate need. Clients can provision increased RAM, processor power, backup utilization and broadband on an as needed basis.

Nationwide Data Centers

Lunavi operates six data centers across the United States. Choose the best location for low latency, disaster recovery, or satellite offices. Cloud hosting can be supplemented with a variety of managed services.
