ROI Blueprints
End-to-End Project and Portfolio Management

ROI Blueprints is a SaaS project and portfolio management product enabling you to manage project schedules, costs, resources, risks, and deliveries easily and effectively.

Problem

Identifying, evaluating, and successfully executing the right strategic priorities isn't easily done, even under the best circumstances. It is made even more difficult if those strategies are not connected to the detailed planning, execution, and delivery of specific projects necessary to fulfill each strategic priority. In addition, the lack of timely and accurate information flowing back to stakeholders about active projects can cause additional risks, project delays and project failures.

Solution

ROI Blueprints is a proven SaaS project portfolio management (PPM) solution focused on maximizing organizational return on project investments while minimizing associated risks. With an intuitive interface, ROI Blueprints can help manage the complete flow of projects through initial intake, planning and monitoring, and final delivery using an interactive visual workflow.

Getting projects done on time is only half of the equation; projects need to be delivered on budget. ROI Blueprints gives you the tools needed to estimate and plan your project funding, track all expenditures, and stay in-line with budgets. Finally, with out of the box, real-time project diagnostics and detailed issue and risk management, you can effectively stay on top of projects while reporting key information to stakeholders across the organization.

ROI Blueprints is part of Sopheon's single, scalable innovation system. Using insights from ROIB Blueprints, Sopheon's solution can assess gaps and opportunities, allowing organizations to steer product and brand portfolios to meet short- and long-term strategic goals. Together, ROI Blueprints and Sopheon bring ability, effectiveness, and efficiency, to innovation management, new product development programs, and product pipelines by connecting strategy to execution.

Key Benefits

10-15% improved performance in project schedule and financials

Improved and optimized resource utilization

Improved project budgeting and capital planning

Reduced impact of issues due to real-time status and project diagnostics

Improved capacity planning

ROI Blueprints is the Best Choice for PPM

Establish Clear Financial Targets and Business Cases

Our financial modeling tool (NPV, IRR, and Payback Period) shows project cash flow and impact to your income statement, with a few simple clicks.

- Automated calculation of planned costs driven by the work breakdown structure
- Capture internal vs. external labor costs, as well as non-labor costs
- Out of the box support for classifying costs as Capital Costs, Deferred Expenses or OpEx
- Project-specific financial ledgers track actual costs at a transactional level including, but not limited to, internal and external labor costs as well as non-labor costs; these costs are then integrated with the timecard module.

Get Visual Governance Workflow

All organizations need a well-defined process for navigating projects from the creation of the business case through execution. System-enabled governance mitigates the risk of inconsistent adherence of processes and policies.

- Interactive project lifecycle workflow
- Built-in change control workflow
- Built-in release management functionality
- System-enabled governance requires sponsor and stakeholder approvals

Provide Real-Time Status and Risk Analysis

With project diagnostic engine and project-specific health score, project managers and the leadership team have the right information needed to take timely and corrective actions.

- Data-driven, real-time status of project health in project health score
- Alerts when variance exceeds thresholds
- Integrated risk and issue management
- Resource management analytics
- Milestone and phase rollup view
- Detailed historical data captures key project metrics, project versions and snapshots
