

## Path

**It is People Who Drive Change. We are Here for Your People.**

While Mapvision Quality Gate provides you the most advanced capabilities in quality inspection and process optimization, it is your people on the ground who utilize these capabilities. That's why we are here to support your teams.

## TRAINING PROGRAMS

The training programs include the mandatory training modules to onboard your team with the Mapvision Quality Gate system and follow-up modules that enable your team to fully utilize the system capabilities.

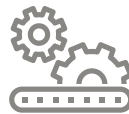

### Mapvision Start

Training modules to fully onboard your factory staff with Mapvision Quality Gate – provided by Mapvision experts.

#### Mapvision Operator

#### Mapvision Maintenance

#### Mapvision Rework

#### Mapvision Exporters

#### Mapvision Correlation

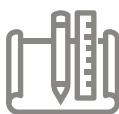

#### Mapvision Process Control

### Follow-up Trainings

Additional training modules to enable your team to fully utilize the Mapvision Quality Gate system capabilities.

#### Mapvision Visualizer

#### Mapvision Programmer

#### Customized Trainings

# CONSULTATION SERVICES

The consultation services provide your team additional expertise by our experts in production analysis, process optimization, and measurement correlation analysis.

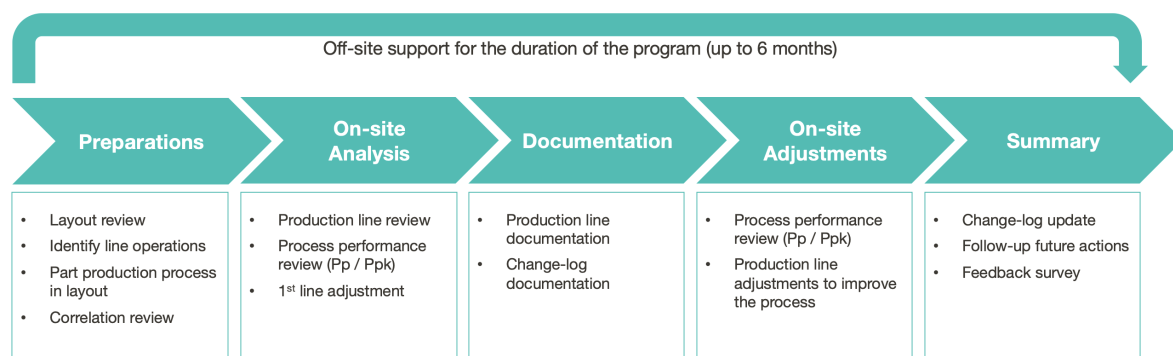

## Mapvision POP

Mapvision POP – Performance Optimization Program is a customized improvement project for your production process provided by our experts. Together with you, our experts will evaluate your process, identify improvement areas, and guide you implementing change to access the full potential of your manufacturing process through Mapvision Quality Gate.

Mapvision POP is particularly recommended during the pre-production phase to ensure process efficiency from the very beginning.

## Mapvision POP - Process Flow

## Mapvision Correlation Consultation

The Mapvision Correlation Consultation aims to ensure strong correlation between your Mapvision Quality Gate System and CMM. As part of the program, our experts will visit your site to review the fixture concept and alignment for compatibility, create a machine readable CMM report format for efficient data transfer that enables easy-to-use correlation analysis and adjustments, and ensure an identical inspection program between CMM and Mapvision Quality Gate.

The Correlation Consultation is mandatory for delivery projects that require correlation to CMM. The service includes two correlation reports and analysis during the delivery.
