

GIS SERVICES

SERVICES

- Database Development
- Data Conversion
- Digitization
- Data Migration
- Layer Development
- Map Development
- Data Integration and Delivery

APPLICATIONS

- Sanitary Sewer Systems
- Combined Sewer Systems
- Stormwater Systems
- Water Distribution Systems
- Electrical Distribution Systems
- Construction As-Builts
- Web-Based Map Portals

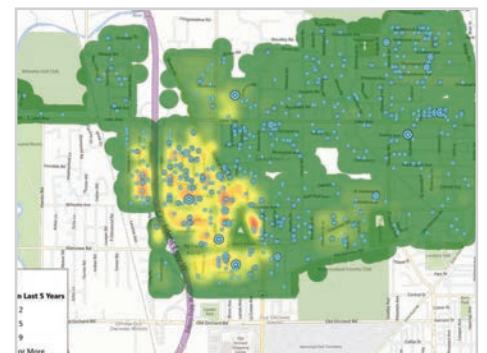

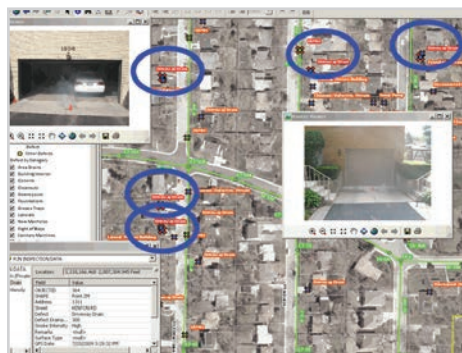

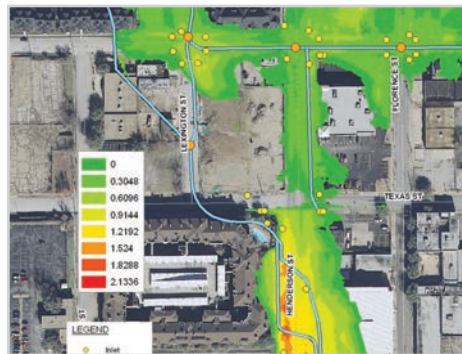

GIS STANDARD

- Silver-Tier ESRI Business Partner

GIS layers and maps are standard deliverables for every RJN evaluation, design, and construction management project undertaken.

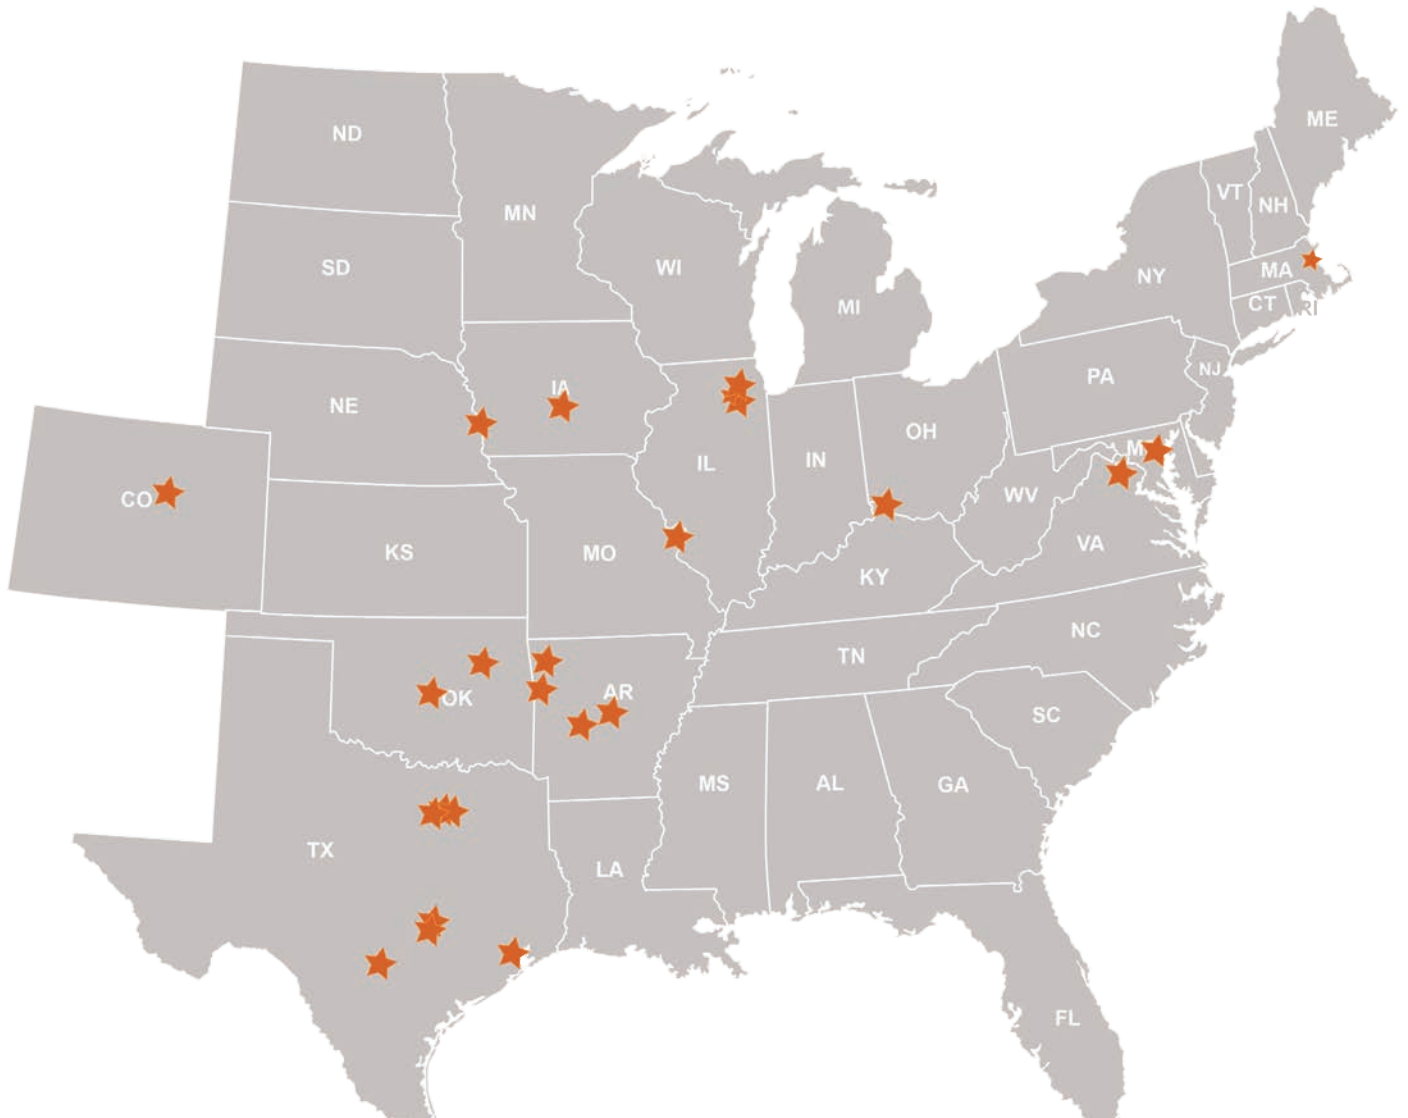

GIS BRINGS ASSET MANAGEMENT AND LONG- AND SHORT-TERM CAPITAL PLANNING EFFORTS TO LIFE BY OFFERING A VISUAL OVERVIEW OF INFRASTRUCTURE SYSTEMS.

RJN Group, Inc., a full service engineering consultant, leverages the power of GIS to drive data collection programs, analyze field results, build hydraulic models, develop sound remediation solutions, and conduct lifecycle modeling and risk analysis. RJN standard field practices capture GPS coordinates for every project site, providing the foundation for RJN-developed data management platforms and client deliverables. RJN GIS specialists can build your GIS database platforms, develop your GIS layers, convert your data to GIS, and integrate data with your third-party GIS-based solutions.

LOCATIONS

RJN serves municipalities and utilities through offices located across the country.
