

STORMWATER SERVICES

PLAN/REPORT

- Stormwater Utility Programs/Fees
- MS4/NPDES Permitting
- BMP Strategies/Reporting
- Ordinance Review/Development
- Public Education Programs

STUDY

- Combined Sewer Studies
- Asset Condition Inspections
- Hydraulic Modeling
- Stormwater Drainage and Runoff

DESIGN

- Storm Sewers/Open Drainage
- Retention/Detention Basins
- Low Impact Development Solutions
- Erosion and Sediment Control

CONSTRUCT

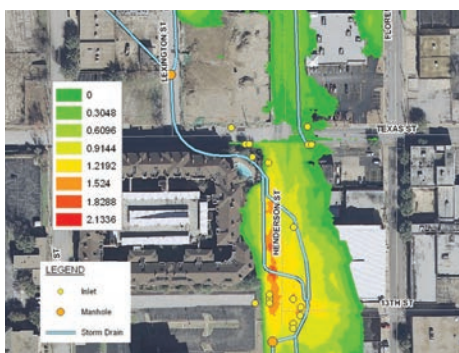

- Resident Engineering Services
- Design-Build Programs

MANAGE

- Asset Management Solutions
- GIS Solutions

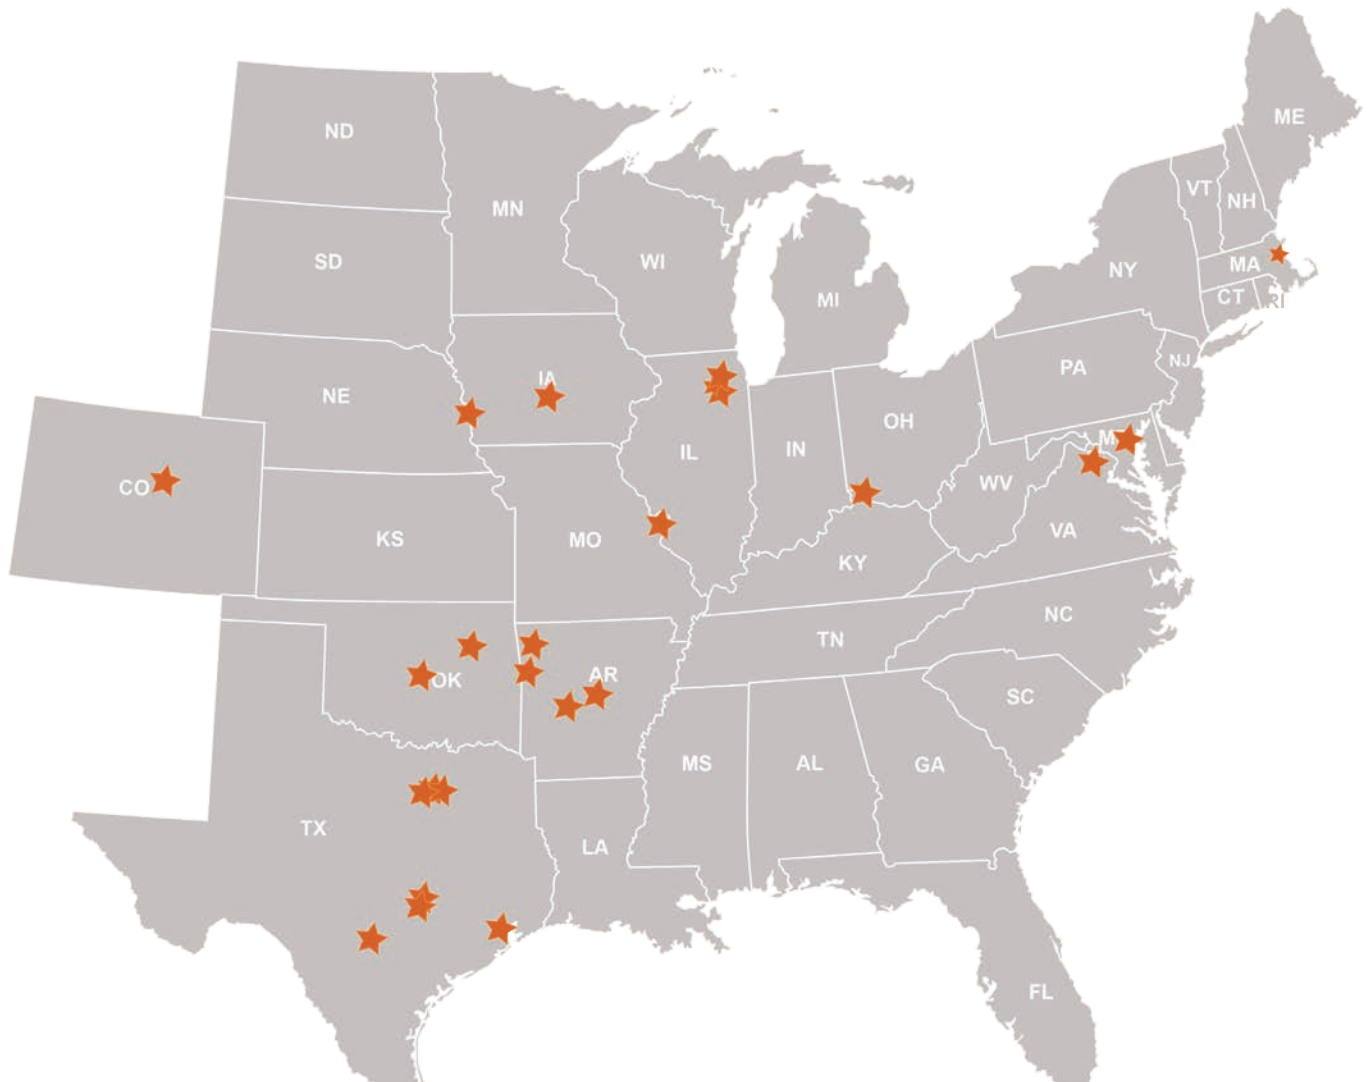

ENSURING WATER QUALITY THROUGH COST-EFFECTIVE MANAGEMENT STRATEGIES IS CRITICAL FOR HIGHLY REGULATED MUNICIPAL STORMWATER SYSTEMS.

RJN Group, Inc. will assess the capability of your storm sewer systems to handle stormwater runoff—precipitation and snow melt that cannot be naturally absorbed into the ground—developing sound and sustainable solutions. MS4 permitting and designs for storm sewer systems; detention, retention, and storage facilities; and erosion control always incorporate Best Management Practices (BMP). RJN can help you develop sensible strategies to manage your stormwater facilities through planning, assessing and design, and stormwater utility cost-sharing and fee programs.

LOCATIONS

RJN serves municipalities and utilities through offices located across the country.
