

5 Ways Healthcare Providers Are Using Raydiant

More healthcare providers are turning to Raydiant for their businesses. That's because Raydiant makes it easy for them to provide an efficient, informative, and comforting experience for their patients and staff.

Here are a few of the ways healthcare providers are using Raydiant in their businesses:

1 Making a better waiting experience
Waiting is an inevitable part of a visit to any medical facility. While you can't change that, you can make the experience better. Raydiant goes beyond simple digital signage, offering full HD audio and video support for a complete multimedia experience. You can use Raydiant digital screens to provide queuing information, news, and entertainment. Better yet, use the Multizone app to combine them all into one dynamic display.

2 Providing up-to-the-minute information
With so much going on at healthcare facilities, things change by the minute. Make sure your signage keeps up. With Raydiant, you can log onto our remote cloud-based platform and make updates in seconds. You can even set up an RSS feed and automatically update your signage.

3 Improving wayfinding
Between the hustle, bustle, and complex floorplans, it's easy to get lost in healthcare facilities. Raydiant makes it easy to help patients and staff find their way. Use digital signage to create highly visible wayfinders that you can update remotely whenever you need to.

4 Honoring staff and donors
Healthcare facilities are filled with heroes. Raydiant helps you show your appreciation properly. Create glowing tributes to staff and donors and display them in beautiful HD resolution.

5 Updating your facility
Appearance isn't everything, but it is something. Digital signage gives any place a clean, modern look. That's especially comforting in healthcare facilities. Install digital signage in your facilities to keep up with times and make patients and guests feel more comfortable.
