5 Ways Houses of Worship Are Using Raydiant

Houses of Worship are increasingly turning to Raydiant to update and improve the way they reach their congregations. And it's no surprise. Raydiant makes it easy to create beautiful signage that helps you celebrate your faith and your community.

Here are just a few of the ways Houses of Worship are using Raydiant in their facilities:

1. **Guiding services**
   With its big, bold displays, Raydiant digital signage is one of the best ways to lead your congregation in prayer and song. Locate screens around your worship area to display passages from texts, lyrics to hymns, or thoughts for the service. Raydiant’s vibrant HD displays will ensure everyone of all ages can see them crystal clear.

2. **Welcoming the congregation**
   Whether you’re welcoming new members for the first time or congregants who never miss a service, creating a warm, inviting environment in your lobby or welcome area is important. Raydiant has all the tools you need to build a complete welcome experience. With support for high-quality audio, you can supply your common areas with a pleasing soundtrack.

3. **Conducting ceremonies**
   Places of worship do more than just hold services. Whether it’s weddings, funerals, or other major ceremonies, digital screens help you honor the event properly. Event directors can use the Presenter app to create elegant multimedia slideshow presentations.

4. **Celebrating community**
   Your organization extends beyond the walls of your House of Worship. With Raydiant, you can shine a light on all the ways you and your congregation are involved in your community. Show off photos and videos of community activities. Engage your younger congregants by turning your social media accounts into a fun social wall.

5. **Operating your organization**
   Raydiant also helps you take care of the part of your House of Worship that people don’t see. Behind the beautiful ceremonies and community events is a fast-paced organization with lots of moving parts. Use Raydiant to keep them moving in sync. Create task lists, display calendars, or set fundraising goals and display them where everyone who needs to can see them.
