Data in. Predictions out.

Take the complexity out of predicting pipe failure.

We don't think you should have to be a data scientist to understand your own data. So we've built an app that brings artificial intelligence and machine learning to everyone. Designed to be open and transparent, this is no black box. Quickly visualize, identify and predict high risk water and wastewater pipes that are most likely to fail, now and into the future.

The Water AI Pipe Predictor (W(AI)PP) from Arcadis Gen is designed with you in mind.

Intuitive and easy to understand, you don't need an expert to get the most out of your asset data. We've put twenty-plus years of AI and Machine Learning expertise into a single app, specifically designed to help water companies get the most out of their data. You can plan with confidence, knowing you're powered by an engine that has been proven in the most rigorous regulated water industries around the globe.

Don't just chase known problems! Transform your investment planning and go from reactive to proactive to achieve sustainable long-term service and cost efficiencies.

Turn the tide on asset planning

**Easy to use**
Get setup in days with minimal training required, on a safe and secure cloud-based app, for immediate business insights.

**Expertise at your fingertips**
Have confidence that you’re making the best decisions for your business, your customers and your shareholders. You’ll be powered by an engine that has been proven in the most rigorous regulated water industries around the globe.

**Plan with confidence**
Get the insights you need to make robust, data-driven investment decisions. Balance corporate risk and investment performance with insights you can trust.

**Understand your pipe network**
Machine learning enables you to understand the performance of individual pipes. Start leveraging the value of the data in your current GIS system.

**Outcomes you can trust**
Advanced analytics at your fingertips, supported by proven experience in artificial intelligence and machine learning specifically designed for the water sector.

**Affordability**
Enterprise-level results in an affordable single app. Advanced artificial intelligence and machine learning for any size of water utilities.

**Fast results**
Quickly visualize and identify high risk pipes that are most likely to fail now and into the future. Make investment decisions that will lead to financial and operational success.

**You’re in control**
Unique data mapping to ensure quality data inputs. You can quickly run and rerun pipe break predictions with easy to understand visualization and reports.

**Cost efficiency**
Have confidence that you’re making the right decisions for your business, with typical efficiency savings of 20% so you can maximize the value of your capital investment budgets through proactive instead of reactive pipe replacement.

Take advantage of machine learning

**Predict pipe failure**
Understand pipe performance now and in the future for budget planning. Run and rerun what-if optimizations to produce intuitive reports in a single, easy to use, app.

**Move from reactive to proactive**
Don’t just chase historic failures. Transform your asset investment planning to solve future problems today.

**Next generation performance engine**
Powerful, best in class, artificial intelligence with machine learning for quick and accurate reporting.

**Built with auditability in mind**
Track outputs back to source data using a robust app built on years of experience working within the highly regulated water industry around the globe.

**Data mapping**
Unique data mapping technology that automatically assesses data quality before being used by the artificial intelligence engine, with no data analyst required.

**Better data visualization**
Easily visualize outcomes, based on your own data, making it easy to decide your next course of action.
