

Relocation Services

Adapt Your Kardex Remstar Solution For Future Needs

- Moving to a new warehouse?
- Changing Process Flow?
- Consolidating Work Zones?

Relocating your existing automated storage and retrieval equipment to match your future requirements can be challenging... we're here to help!

When done right, relocating existing storage and retrieval unit(s) allows you to easily adapt your existing Kardex Remstar solution to your future needs. Disassembling, transporting and reinstalling existing equipment is a highly demanding logistical task that requires trained personnel and a solid relocation plan.

Planning is the key to your success

Here are a few logistical challenges to plan for:

- Impact on business activities – if operations will be impacted it's important to understand the implications and timeline
- Safety of the unit and staff involved in the relocation
- Transportation of the physical unit
- Temporary storage area for all inventory
- Reassembly and testing of the unit in the new location
- Transportation and reloading of inventory

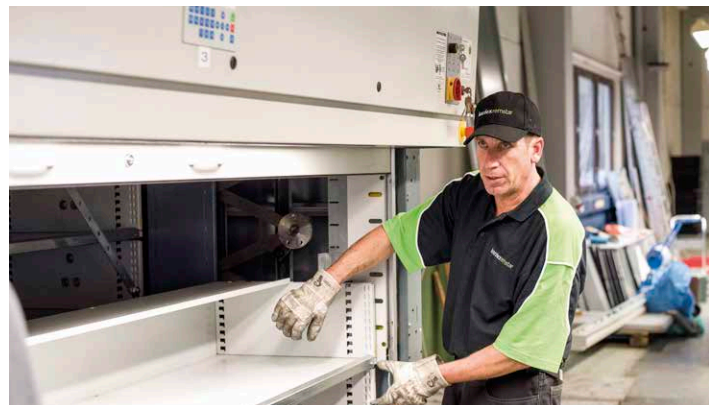

Relocation Within A Building Or To An Adjoining Building

When relocating a unit within the same building or to an adjoining building, some units can be moved with the help of special equipment and qualified service technicians without having to be dismantled. Using slides or rollers the unit can be moved without unloading and disassembling – saving you time and money when maximizing your machine efficiencies and usability.

Take The Risk Out of Relocation

Kardex Remstar factory certified and experienced service technicians will ensure the safe relocation of your existing Kardex Remstar equipment – keeping the warranty in place. Our technicians will survey both locations and work with you to create a relocation plan that is safe, organized and cost efficient.

Over 55 % of Kardex Remstar units relocated by non-certified technicians were reassembled incorrectly and developed expensive repair costs in the last 3 years. With Kardex Remstar you know you're in safe hands.

The Kardex Remstar Relocation Process

- Survey both the current and future unit locations
- Provide a relocation plan and price estimate
- Complete Operational inspection check before the machine is relocated
- Disassembly and Reassembly is performed by a factory certified technician
- Packing and transportation can be included if required
