

TRIBUNAL DE CONTAS DA UNIÃO  
Fiscalização a serviço da sociedade

Public institutions and companies are adopting a Multicloud modality to manage and streamline computing and digital assets.

### The Brazilian Federal Court of Accounts: Multicloud Experience

The Brazilian Federal Court of Accounts (TCU) is a public government institution responsible for managing income accounts, public spending, and verifying the legality of transactions before they are presented to the National Congress.

Responsibilities driving the TCU to need flexible Cloud services that exceed standard requirements in today's evolving digital market.

Faced with these new demands, Claro Cloud implemented a Multicloud solution that integrated the expert architecture of Cloud providers with our one-of-a-kind white-glove services. In addition to orchestrating the Cloud providers and managing more than a thousand virtual servers, the partnership included platforms that met the requirements of ministry and architecture, support, and services managed by EMBRATEL.

Through our Multicloud services, the Brazilian Federal Court of Accounts gained:

- Greater flexibility with a multiple Cloud model
- An expert ecosystem managed by professionals
- Greater flexibility with a multiple Cloud model
- Centralized billing and support
- Customer service for their entire national territory
- Multicloud architecture and operation

Companies and public institutions that handle high volumes of data for multiple products or services will find Cloud Computing from Claro Cloud as an effective tool to achieve their objectives.

#### Cloud Computing implementation benefits:

- Reduced costs
- Immediacy
- Availability
- Scalability
- Efficiency
