## THE MODERN WORKSPACE AT YOUR FINGERTIPS.

With AppBakery and CMInsights, Kraft Kennedy can work with you to develop an environment that improves productivity and provides the scalability to meet your organization's future needs.

## WHAT IS appbakery?

The AppBakery is a proprietary website application created by Kraft Kennedy that allows your team to view, request, and download the latest version of application packages. Once complete, packages are then available for download and integration by your firm within the AppBakery.

Every application that is packaged by our team is easily managed on the site. There are over 1,000 applications in our inventory waiting to be packaged with your firm's client customizations. Custom application packaging is also included if it is not listed in our inventory.

### WHAT'S INCLUDED:

Application Portfolio Management

Application Version Feature Analysis

Application Packaging

UE-V Template Library

Custom silent installation packages with preset application settings

UE-V templates to preserve application-specific settings between logons (varied workstations; Citrix; Remote Desktop)

### GET ACCESS TO:

**A complete application portfolio** for your end-user environment, which will document key information including applications being used, application categories, distribution methodology, and supported versions.

**Reporting** that will detail new features that may improve your business environment or otherwise enhance productivity. Kraft Kennedy will track and review feature releases of key applications in the client's environment.

## WHAT IS CMinsights?

In an effort to enhance our services, we have developed a series of iterative real-time reports of Microsoft Endpoint Configuration Manager (MECM), formerly SCCM, that will be available within the AppBakery.

MECM reporting can be complex, but we've simplified that by developing reports our clients can find most useful. The reports work by querying and retrieving key configuration data from your MECM SQL server and delivering them in a dashboard view.

### WHAT'S INCLUDED:

MECM Infrastructure Data

Patching & Compliance Data

Encryption & Hardware Data

Deployments (outside Task Sequence)

### GET ACCESS TO:

**Dashboards** indicating number of site servers, distributions points, as well as total workstations and clients in your environment

**Hardware inventory** list and BitLocker status

**Charts** indicating Windows 10 version and OS lifecycle the firm is on, as well as Windows 10 patch compliance data

**Compliance data** for any application packaged by Kraft Kennedy, deployed outside of a Task Sequence
