

DIGITAL CONTRACT EXCHANGE (DCX)

Carrier rate data integrated directly into Magaya Rate Management, providing full and fast coverage of your rate data

Ongoing rate volatility is forcing forwarders to move faster than ever. Rates expire quickly, require constant updates, and are subject to endless accessorial charges. DCX, the Digital Contract Exchange for Magaya Rate Management enables faster, easier, and more accurate transfer of rate data between ocean carriers and freight forwarders or shippers.

BENEFITS

Accelerate Speed to Market

Manage rates and update quotes at the speed of change. With carrier rates constantly evolving, freight forwarders need to keep pace to protect profit margins.

Boost Operational Efficiency

Carriers structure rates one way, customers want their quotes another. DCX brings both together within the same platform, making it easier and more efficient than ever to manage quotes and rates.

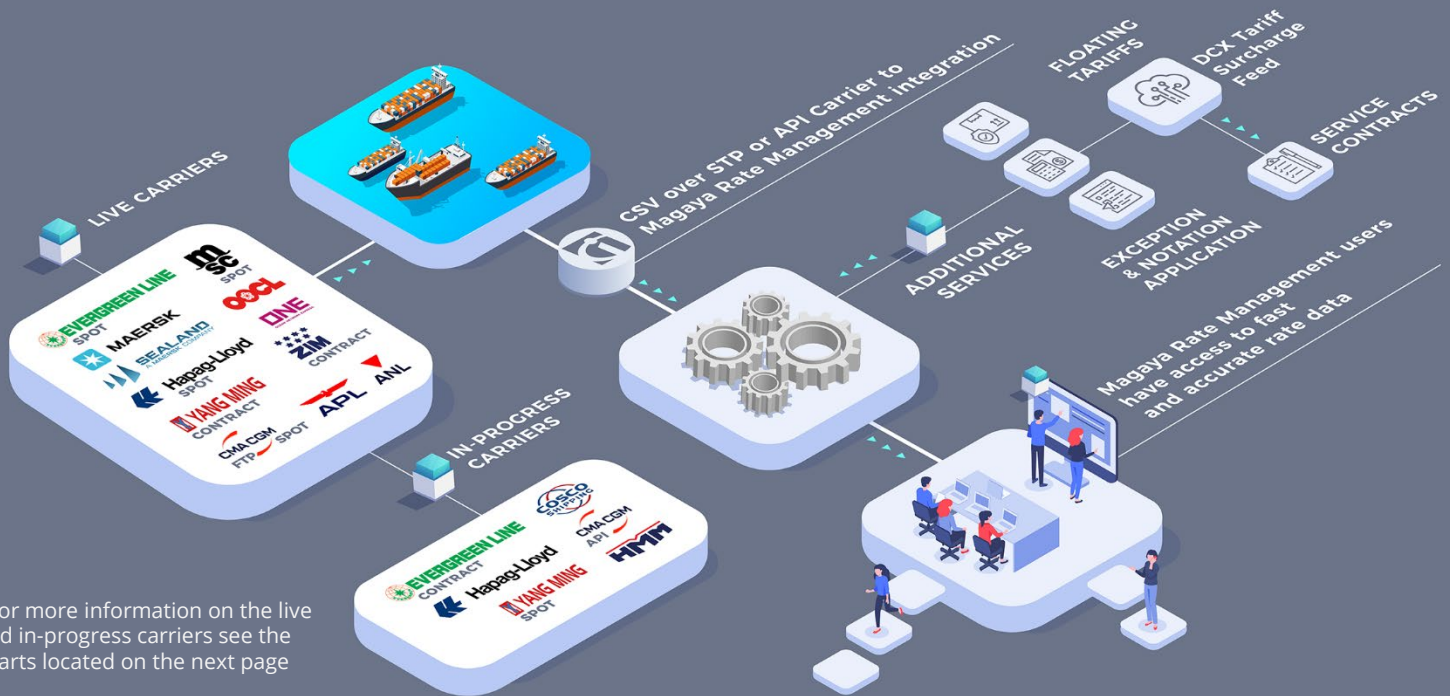

Stay Ahead of the Competition

With fast and easy access to the best rates, you can identify-and get ahead of-trends. Plus, your customers can send you RFQs right through Magaya Rate Management and view rates in real-time.

Boost Margins and Cut Costs

More accurate, same-day rates lead to better margins and prevent costly disputes. Plus, improved operational efficiency in rate management helps you close more deals, directly impacting profitability.

*For more information on the live and in-progress carriers see the charts located on the next page
