

Electronic Air Waybill

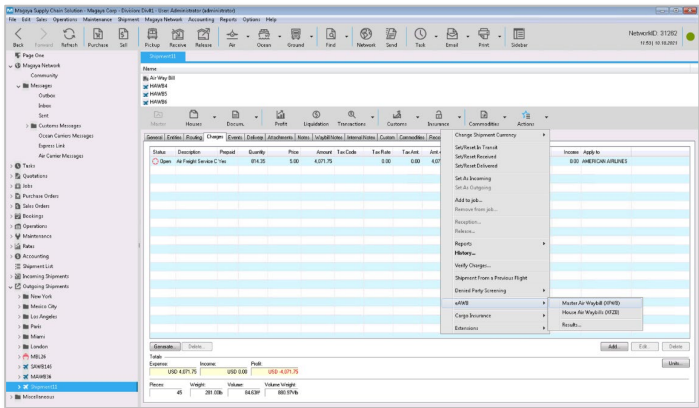

Send eAWB directly from your Magaya system

Accelerate your air shipments with real-time electronic airline data exchange

Paper air waybills are error-prone and time consuming. If that's not enough, eAWB (electronic air waybill) has become the industry standard, with some airlines even charging an additional processing fee for delivering paper air waybills.

Modernize your air shipping operations and send eAWB directly from your Magaya system. You'll save time and money and keep your airline partners happy by sending your Master and House air waybills electronically.

You'll also benefit from getting instant response messages and acknowledgements from the airlines as well as freight status updates right in your Magaya system, giving you added visibility and control.

BENEFITS

Cut Costs

Reduce courier costs and cut the cost of printing AWB documents on paper or purchasing pre-printed AWBs.

Increase Efficiency

Reduce the time spent on manual tasks, printing, and data entry by managing everything in the Magaya system.

Stay Compliant

Meet regulatory compliance rules with the industry standard for air waybills.

Prevent Delays

Catch errors earlier and reduce delays caused by illegible paper air waybills due to tears, rips, corrosion, water damage, etc.

Improve Reporting

Better data is the foundation for smarter decision-making. With eAWB, the data you report on is the same data shared with the airline, making your reports more accurate.
