Language Packs

Engage your learners in their own language.

Destiny One's licensable Language Packs give colleges and universities a simple way to improve how they engage with current and prospective students by offering a website that can be displayed in multiple languages. With Destiny One Language Packs institutions can expand into new markets around the world, attract new students to the school, and increase their student-centricity by allowing students to drive their online experience more fully.

Communicate with your students in their own language by publishing public-facing websites and student-facing reports and emails in multiple languages

Quickly configure your website for different languages

Language Packs reduce the time it takes for schools to publish a website in different languages. Staff can import content in the language of their choice into Destiny One in a few clicks.

Facilitate multi-lingual browsing with dynamic language toggles

Current and prospective students can select their preferred language for the public website and for the self-service student portal on the fly. Students can switch between enabled languages whenever they like.

Enhance communication with learners online and offline

Beyond web browsing, Destiny One Language Packs let institutions communicate directly with learners in the language of their choice. All appropriately translated emails, certificates and reports can be sent to students in their preferred language.
