

Exchange data seamlessly between Destiny One[®] and PeopleSoft

About

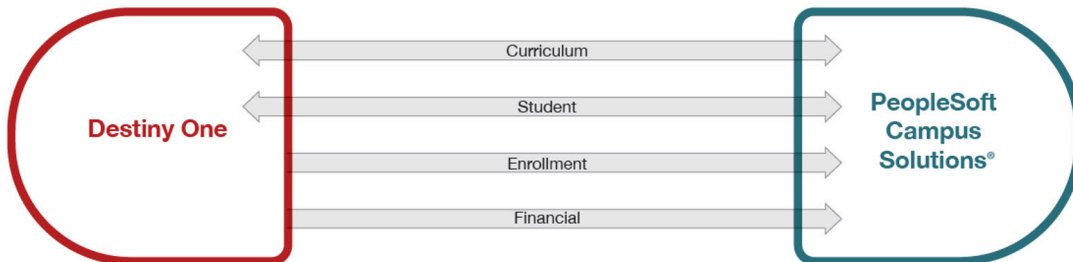

The Destiny Connect PeopleSoft Campus Solutions Connector offers out-of-the-box integration capabilities to exchange data between Destiny One and PeopleSoft. This allows schools to leverage Destiny One features that are tailored to operate a successful non-traditional learning division while maintaining PeopleSoft Campus Solutions as the system of record.

Benefits

The pre-built integration templates minimize the effort associated with setting up the connector. These templates handle the business logic, object, and field mappings and transformations between the source and destination systems. The administrative user interface of the Integration Platform allows each school to configure the business logic and rules to match their implementation of PeopleSoft.

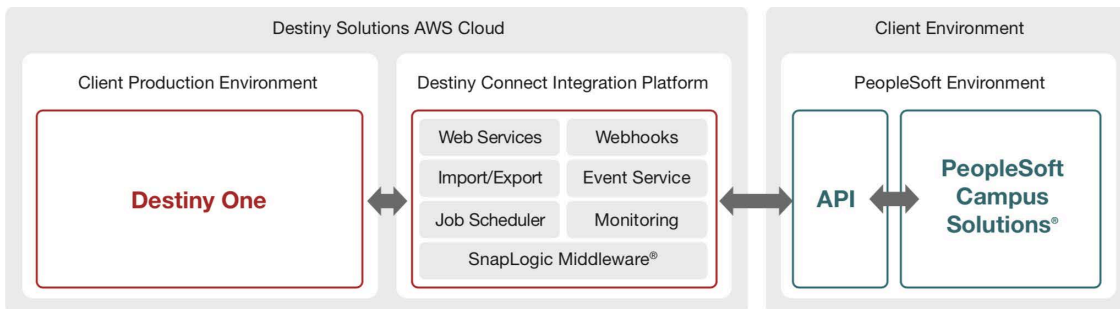

Integration Use Cases

This connector supports these use cases:

Architecture

Destiny Solutions incorporates the industry-leading integration platform-as-a-service, SnapLogic, hosted and managed on Destiny Solutions' AWS hosted environment, to facilitate the integration use cases.

Monitoring and Troubleshooting

All integration events are audited and logged, and available to administrators and business users with appropriate permissions, through the user interface. Tools are available to view integration payloads, inspect errors, retry failed events, and resolve issues.

Rapid Guided Implementation

Seamless bidirectional data flows between Destiny One and PeopleSoft can be implemented in very little elapsed time and with minimal effort. The pre-built integration templates have been designed to follow best practices and typical business rules. As part of the implementation, Destiny Solutions' implementation consultants will guide your subject matter experts through guided sessions to configure your school's business rules and mappings.

Partner with non-traditional learning experts to engage learners as customers, optimize efficiencies, gain business intelligence, and manage admin infrastructure.
