

FOR IMMEDIATE RELEASE

AerCap opts for PACE route and aircraft economic analysis software

Global leader in aircraft leasing and aviation finance to support aircraft evaluations with Pacelab Mission Suite

BERLIN/SEATTLE, 23 March 2017 – Aerospace software provider PACE today announced that AerCap, a global leader in aircraft leasing has purchased its route and aircraft economic analysis tool Pacelab Mission Suite. Pacelab Mission Suite will provide AerCap leasing and trading teams with reliable projections of aircraft operational performance, costs, revenues and profits on specific routes or route networks.

Performing a comprehensive comparison based on a wide array of technical and economic criteria, Pacelab Mission Suite helps establish a level playing field for contending aircraft types – an important asset considering AerCap’s highly diversified fleet portfolio, which includes more than 1,500 of the most in-demand and technologically advanced narrow- and wide-body aircraft.

Pacelab Mission Suite also provides a swift setup of new investigations, which enables aircraft leasing companies to quickly process customer requests and to trade off large numbers of aircraft, routes, runways, and/or economic parameters.
