

# Enclosures Protect Edge Installations

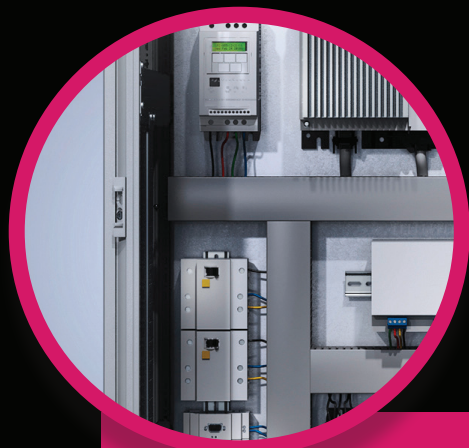

Edge installations are often in remote, secluded locations where physical security can be the only barrier to a cyberattack. Enclosures provide environmental and intrusion protection.

**Construction:** Steel folded 16x and closed welded for stronger frame construction and fewer points of failure. The TS IT is bullet-proof and provides a level of explosion protection.

**Hinges:** Internal hinges make dismantling the door impossible.

**Lock:** Internal lock system reduces the chances of a breach by prying the door open.

**Rittal's TS IT** modular enclosures are built tough for the toughest environments.

Download our Edge Infrastructure Handbook to learn more about how Rittal is leading the way to the edge.
