

Emles Federal Contractors ETF

FEDX

Fund Objective

The Emles Federal Contractors ETF (FEDX) seeks investment results that correspond, before fees and expenses, to the price and yield performance of the Emles Federal Contractors Index, an index designed to provide access to companies that have high revenue exposure to federal contracts with the U.S. government.

Key Features

Opportunity

Companies with high exposure to U.S. federal contracts may offer stable through-the-cycle revenues, as federal contracts are guaranteed by the U.S. government. The Emles Federal Contractors ETF aims to include companies with weighted average revenue exposure to federal contracts of 50% or more, which may provide investors defensive equity exposure.

Portfolio

The Emles Federal Contractors ETF (FEDX) aims to provide investors with exposure to companies that potentially stand to benefit from the perceived stability of federal contracts with the U.S. government, particularly in periods of economic uncertainty.

- Managed by an experienced investment and portfolio management team with a track record of innovation
- Tracks a thoughtfully designed proprietary index that offers exposure to federal contract revenues
- Invests in a portfolio of U.S. companies that have significant revenue exposure to federal contracts with the U.S. government

Outcome

FEDX seeks to provide upside potential and a competitive yield for investors who seek defensive equity exposure. Complement or diversify your core equity exposure with the Emles Federal Contractors ETF (FEDX).

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and principal value will fluctuate, so that Fund shares may be worth more or less than their original cost when sold. Performance data current to the most recent month-end is available at www.emles.com or by calling +1 (833) 673-2661. You cannot invest directly in and index. Shares are bought and sold at market price (closing price), not net asset value (NAV), and are not individually redeemed from the Fund. Market performance is determined using the bid/ask midpoint at 4:00pm Eastern Time when the NAV is typically calculated. Brokerage commissions will reduce returns.

Investors should consider the investment objectives, risks, charges and expenses of the funds carefully before investing. This and other information are contained in the Fund's prospectus, which may be obtained by visiting www.emles.com or by calling +1 (833) 673-2661. Please read the prospectus carefully before you invest.

Investing involves risk, including possible loss of principal. ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Small and mid-capitalization companies may be more vulnerable to adverse business or economic events than larger, more established companies. Investments in derivatives involve a number of risks, including counterparty risk, illiquidity, and losses greater than if they had not been used. Investments in foreign securities may involve risks such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. Events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Global events such as the current novel coronavirus (COVID-19), terrorist attacks, natural disasters, social and political discord or debt crises and downgrades, among others, may result in market volatility and have long term effects on both the U.S. and global financial markets. The Fund is non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance. The Fund is not actively managed and would only sell shares of an equity security if that security is removed from the Index or the Index is rebalanced. Please see the prospectus for details of these and other risks.
