ABOUT US ⌄

Our mission is to provide **transparent, rapid, and trusted managed security services** (MSSP). Our analysts and threat hunters are highly skilled Cyber Security practitioners with decades of experience in the real world, we don't do "theory". We aim to reduce the noise experienced by a traditional Security Operations Centre and test your defences to ensure the technology we have put in place is worth the investment. A simple mission with effective results. Find out more at tiberium.io.

INTRODUCING FROST - OUR FULLY AUTOMATED SERVICE TO REDUCE CYBER RISKS, DETECT PROBLEMS & REACT IMMEDIATELY

IS FROST RIGHT FOR YOU? ⌄

DOES THIS LOOK LIKE YOU?

Risks
You know there are risks out there but not which ones are real threats to you

Business
You want to focus on your business, not choosing tools and hiring people to run them

Automatic
You want a service that is going to catch and stop the most common things itself

Clarity
You want incident information that will mean something to whoever has to deal with it

WE CAN HELP IF...

Office 365
You use Office 365 now or will do soon

Standard
Your Microsoft estate is pretty much out of the box

Anti Virus
You have a basic Anti Virus product

Roles
You don't have (or want to have) a security team

CAN YOU PROTECT AGAINST THESE COMMON THREATS? WE CAN

Phishing
The most likely way for malware and attackers to get in. Can you spot it and block it?

Ransomware
Could be disruptive to your whole business. Could you prevent, detect or contain it?

Your reputation
Your own IP or sensitive customer information. Can you prevent it being stolen?
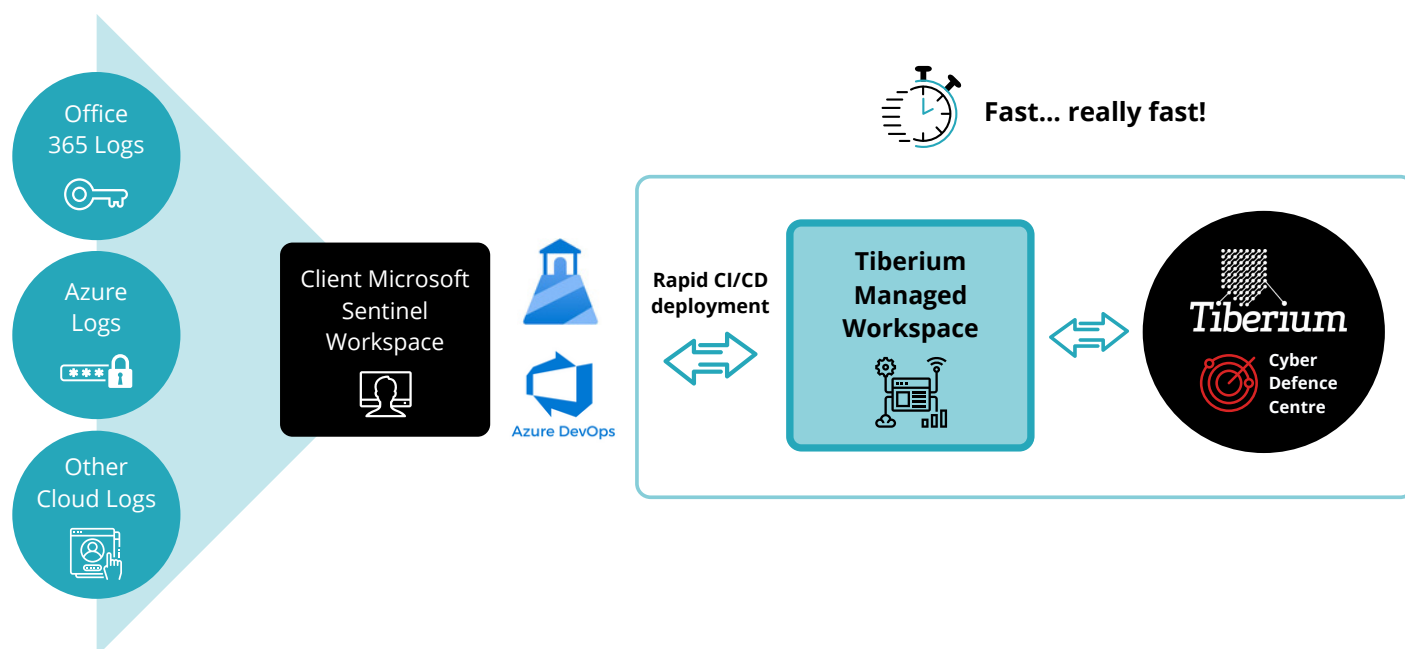

WHAT DOES FROST DO? ⌄

PREVENT THESE

Phishing	Ransomware & Malware	Missing patches	Unauthorised account access	Unauthorised applications

DETECT THESE

Privileged account escalation	Unusual data exfiltration	Contact with suspicious sites	Suspicious software use	Suspicious user activity

REACT BY

Isolating devices	Stopping active processes	Blocking access to sites	Removing malicious files or emails	Supporting forensic analysis

HOW DOES IT WORK? ⌄

Like a SOC, but better...

Your logs and **a rapidly deployed Microsoft Sentinel Workspace** stay in your environment. We configure connectors to provide us the security event data we need. We can take logs from almost anything that creates them and has security value.

We check the configuration of your environment and can automatically harden the Microsoft elements to best practice to reduce the attack surface.

Fast... really fast!

Office 365 Logs

Azure Logs

Other Cloud Logs

Client Microsoft Sentinel Workspace

Azure DevOps

Rapid CI/CD deployment

Tiberium Managed Workspace

Tiberium

Cyber Defence Centre

We add a dedicated **Teams channel** to collaborate with you and your staff.

Cyber Defence Centre

Leveraging our experience and **automation**, we are able to work in a world of high-fidelity alerts and not noise.

Real-time dashboards help you keep tabs on any alerts and how the service is running. Views are customised for executives and technical resources
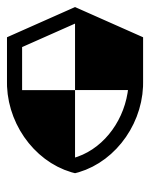

We can do this **in hours** rather than the weeks and months a legacy MSSP may take
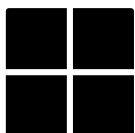

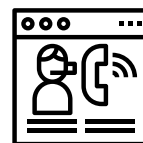

WHAT DO WE DO DIFFERENTLY? ⌄

Prevent more, detect faster, react automatically

With no legacy platforms to deal with, we built from the ground up with DevSecOps innovation giving **unmatched speed and automation**.

A world-first native **MS Team integration** means we can work as part of your organisation and interact naturally. It's just better way of working.

Our collaboration with **Microsoft** means we can get the best out of their tools and your licences. If your existing tools aren't Microsoft but have open APIs, we can maximise that investment too.
