INTRUSION

Protect everything. Trust nothing.

INTRUSION *Shield* ™

Your business has been breached and is vulnerable to all types of security threats. You need aggressive protection against malware, ransomware, data theft and other nefarious cybercrime. **INTRUSION** *Shield* is a comprehensive, network-centric, Security-as-a-Service solution for all businesses and governments.
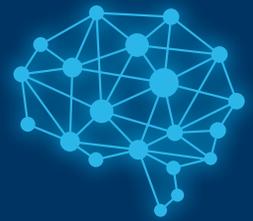

INTRUSION *Shield* works different than cybersecurity products that try to keep bad actors out of your network. We know that all networks are already compromised from malware, spear phishing, breaches of firewalls, malware embedded on foreign manufactured device components, memory sticks, IoT devices, and dozens of other methods. That's why we work from the inside out, detecting criminal agents living on your network and neutralizing them in real time.

INTRUSION *Shield* uses:

- AI to detect and block malicious network traffic.
- real-time analysis of all incoming and outgoing packets.
- the world's largest Approve list of 3.7 billion IP addresses.
- the world's largest Block list of 3.2 billion IP IPv4 and IPv6 addresses, signatures and rules based on DNS, TCP, and UDP.

To protect your company by:

- quarantining rogue agents and bad actors
- stopping ransomware and other nefarious activities
- stopping viruses and malware
- halting impersonation fraud
- shutting down business email compromises (BEC)
- preventing theft of intellectual property
- blocking fuzzing, contract hacking, and machine learning poisoning
- ending data compromises and data theft

Cybercrime is set to cost businesses $5.2 trillion within 5 years.

– Accenture, Cost of Cybercrime Study, 2019

Cybercrime created 94 million victims in 2019.

– Norton

INTRUSION *Shield* is
the premier cybersecurity
solution because:

- **A quarter century of research** and analysis has gone into creating our one-of-a-kind, threat-enriched Big Data Cloud of global Internet traffic.

- **We mitigate financial and reputational risk** from cybercrime by bringing a level of protection that is immediate and unmatched.

- **You benefit from a huge virtual team** of IT resources without the expense of a single IT engineer.

- **No change management is required** as our solution utilizes plug-n-play implementation.

- **Threats are neutralized** upon detection without the traditional requirement of equipment cleansing.

- **We prove efficiency and effectiveness** with frequent reporting that improves C-suite and boardroom transparency.

We easily fit into your existing InfoSec solution

Edge Router/
NAT/
