

20' Motor Control Center (MCC) Enclosure

Dimensions:

20'-0" (L) x 8'-0" (W) x 9'-6" (H)

Problem Solved:

Modified container solutions were needed to support the customer's MCC and field connections to an existing lumber mill.

Description:

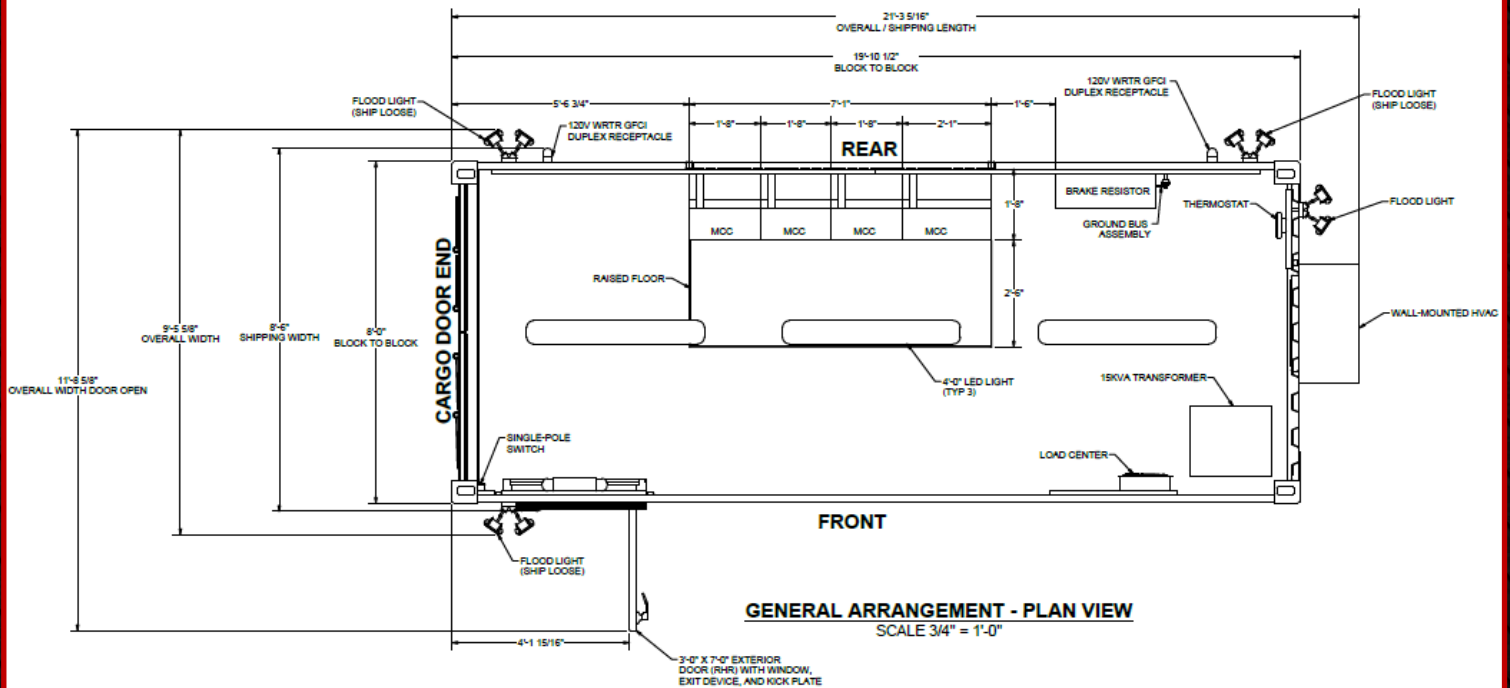

DropBox worked directly with the customer on two container locations to house new MCCs and be installed at their existing lumber mill to replace older equipment. The container exterior modifications included an entry door, wall-mounted HVAC, and cable pass-thru. The first location required bottom cable entry and a raised platform for MCC and front electrical workspace. The second location required top cable entry and a custom removable cover above MCC on interior and exterior of container.

At DropBox, Inc., we are Reinventing the Box™ with high quality, customizable, sustainable shipping container modifications and engineered enclosures that make us the design/build partner for customers around the world. With a proven track record for quality and customer service, DropBox, Inc. has planted its roots firmly throughout numerous industries and built longstanding relationships with customers through custom products that meet their company specific needs.
