

## Security Enclosure

### Dimensions:

25'-0" (L) x 8'-0" (W) x 9'-6" (H)

### Problem Solved:

A modified container solution was needed for overseas deployable security with generator backup.

### Description:

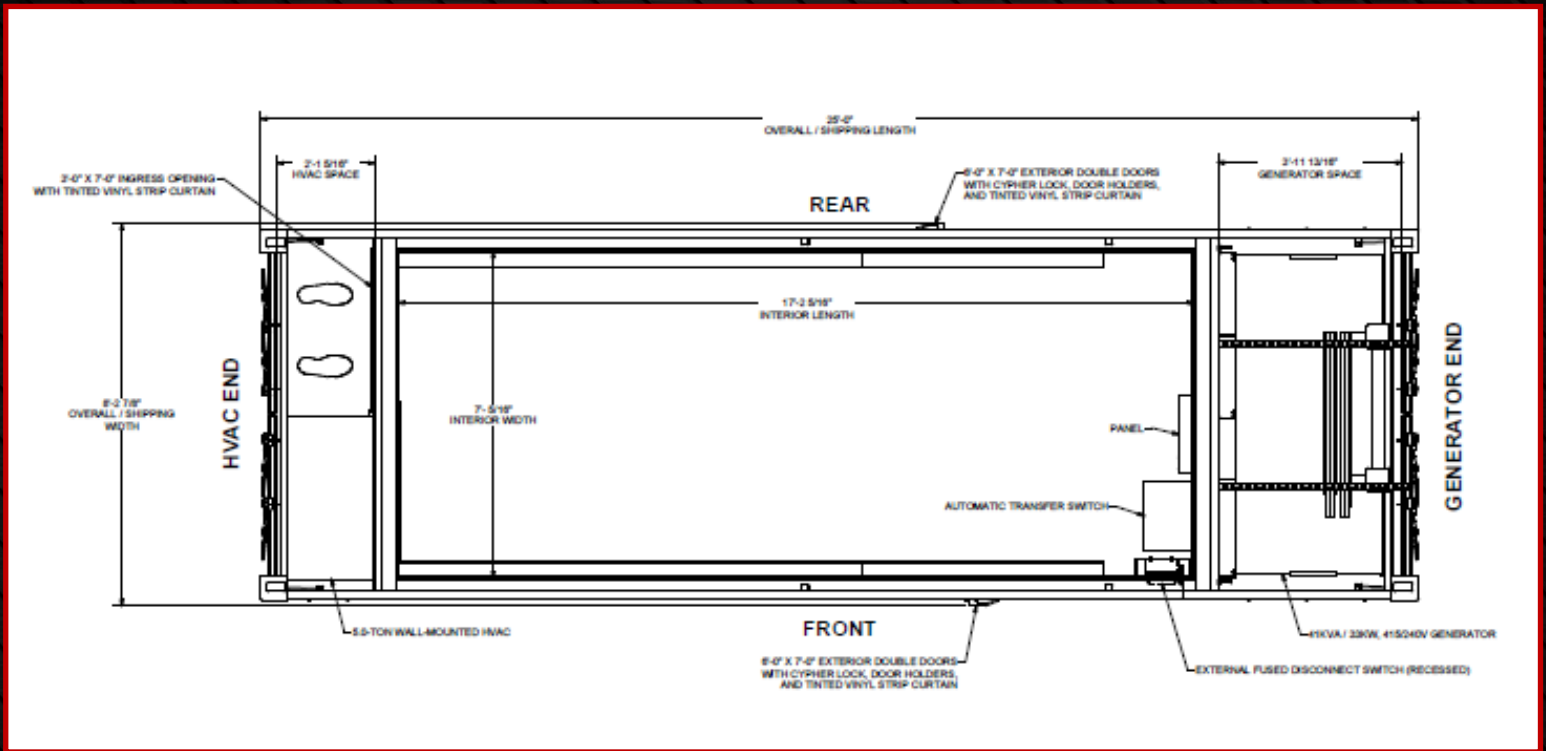

DropBox supported the customer's proprietary security scanning process for overseas deployment in a desert environment. The site limitations did not allow for standard container dimensions. A 40' double ended cargo door container was reduced in length to 25' and maintained both sets of cargo doors. Modifications included recessed HVAC system, 3' ingress door with light-reducing vinyl strips, two 6' side egress doors with light-reducing vinyl strips, automatic transfer switch, electric panel, insulated walls and ceiling, raised floor for customer wiring, and recessed generator. Due to space limitations, the 33kW generator was within the footprint of the container during operation, but a custom track system was fabricated to allow the generator to be extended outside for maintenance.

*At DropBox, Inc., we are Reinventing the Box™ with high quality, customizable, sustainable shipping container modifications and engineered enclosures that make us the design/build partner for customers around the world. With a proven track record for quality and customer service, DropBox, Inc. has planted its roots firmly throughout numerous industries and built longstanding relationships with customers through custom products that meet their company specific needs.*
