

ORCA M + MODsense

A COMPREHENSIVE SOLUTION

MODsense, seamlessly integrates into ORCA M offering temperature monitoring for sensitive shipments. Users can pre-define dedicated requirements for each shipment, automatically evaluate performance, and conformity upon readout.

The MODsense data-logger is held securely inside the ORCA box. When the package is received, the shipment ID on the parcel can be scanned by the end user or a third-party logistics provider who has the MODsense app. From here the temperature data of the payload can be viewed without opening the parcel, maintaining payload integrity.

HOW IT WORKS

The logger is securely mounted in the middle of the payload carton using ORCA ML payload carton

1. Scan external shipment ID on the ORCA box using the Modum App.

2. Location and temperature data are instantly transferred to the Modum portal for everyone to view.
