TURNKEY INSTRUMENTS – MINING CASE STUDY

PROJECT

Verification & Compliance – Customer Assets

SECTOR

Mining & Minerals

APPLICATION

Condition Monitoring, DMR Compliance & Document Management

DATE

Engagement - June 2019

HOW DID ASSETPOOL HELP?

Turnkey Instruments SA, is an authorized distributor of the UK based OEM Turnkey Instruments Ltd. Turnkey Instruments SA's core business is to facilitate mandatory periodic dynamic brake testing, for their clients in the mining sector.

Turnkey used to perform a brake test, store a printed record of the test on site, within a couple of days transport the evidence back to their head office, at which point they would capture the report details into an Excel spread sheet and send this on to the relevant mine. AssetPool captures & records the test live as the test is done and stores the evidence in the cloud where their customer can access the information at any time. Providing ultimate compliance & peace of mind.

KEY BENEFITS

- Machine physical condition monitoring
- Mine Risk Management – Reducing downtime
- Staff efficiency & performance management
- Paperless record keeping – Immediate data access
- Machine & Staff location verification – Geo Location
- Own fleet & asset management
