

## ONE SECURITY VENDOR FOR ALL OF YOUR OPERATIONS

### NATIONWIDE SECURITY CORPORATION

## Keeping Your Organization Safe Nationwide

Nationwide Security Corporation provides security installation services countrywide for national accounts, those clients with multiple facilities throughout a region of the country or entire country.

Many national accounts prefer to deal with one security vendor for all their requirements. This insures consistency of design, products, and pricing. It also allows for the client to call one company only for service issues and have all their systems monitored by the same company for quality assurance. NSC offers all of their systems and services to national account clients including installation, monitoring, and mobile app services. For intrusion and access control systems, the web browser or mobile app service allows either NSC or the client to make system code and programming changes to all of their facilities nationwide from one location. For video management systems, the mobile app allows system cameras to be viewed from a smart phone for alarm verification or monitoring purposes.

## SECURITY FROM EVERY ANGLE

### TECHNOLOGY

- Highest Quality Products & Systems

### EXPERIENCE

- 30+ Years in Business
- Over 10,000 Systems Installed

### SUPPORT

- Security Maintenance Plans
- System Support

### COMPLIANCE

- NFPA
- UL

## CERTIFIED NETWORK

NSC has a network of certified and qualified security integration contractors across the nation to support its efforts to service clients of any size and any need.

All contractors are vetted by both NSC and the manufacturer of the product being installed. In that manner NSC can guaranty the national account client that they will universally receive the same excellent installation and service given to our local and regional clients. NSC coordinates, oversees, and participates in the installation and programming of all systems installed. In most cases NSC can access all installed systems from their main office to diagnose and possibly fix any issues before having to send a contractor on site. This system generally works much better than large national security integrators with many offices around the country because in many cases the quality of their service is vastly different from branch to branch or their are client sites where no branch exists and they have no mechanism in place to install and service in that area. NSC can install, service, and monitor security systems for national clients anywhere in the country.

For all your national  
account needs,
