

## MODERN SECURITY SYSTEMS FOR GOVERNMENT BUILDINGS

### NATIONWIDE SECURITY CORPORATION

## Keeping Your Government Facility Safe

Nationwide Security Corporation is proud to be one of only three security companies in the State of CT to hold the executive branch State Security Contract, #17PSX0002. Not only does this mean we can provide security systems to State facilities, it also means the pricing structure for the contract can be extended to municipalities and non-profit organizations in the state. Because NSC has already been pre-qualified for the work as a contract holder, municipalities can forego the public bidding process and use the State contract for procurement, saving both time and money.

Nationwide Security Corporation's portfolio boasts an extensive list of local, state, and federal government buildings. In the State of Connecticut alone, we have secured:

- Courthouses
- Parks
- Museums
- Municipal Centers
- Housing Authorities
- Police Departments
- Governmental Offices
- Fire Departments
- Clinics and Rehabilitation Facilities
- Military Posts

- NFPA
- UL

## GOVERNMENT CERTIFIED SYSTEMS

Our high quality products and UL & FM certified Central Monitoring Station provide government facilities with the highest level of security imaginable.

Federal, state and local government facilities are increasingly tightening security and looking for sustainable ways to do so. This is especially true as more new and specialized government agencies emerge. Nationwide Security Corporation recognizes the vulnerability of these agencies and the need to design innovative, integrated systems. Our Government security solutions integrate burglar protection, fire prevention, access control systems, video management systems, intercom systems, and turnstiles into a state-of-the-art-system that deters incidents from occurring.

The unfortunate acts of terrorism in our country in the last 20+ years prove the importance of governmental building security and life safety. These tragedies have impacted both the structural design and technology of new and existing government facilities. Increasing security for government buildings means creating sustainability and a better design for prevention. Buildings that house computers, expensive equipment and important records require special safety planning and design as well as additional security equipment to limit entry points such as card readers, metal detectors, turnstiles, and other perimeter security options.

Nationwide Security Corporation is dedicated to the safety of our local, state, and federal buildings so they may continue to offer valuable public service.

For all your government security needs,
