

How to Read Your Comparative Savings Estimate from MyHealthMath

So you just received your MyHealthMath (MHM) Comparative Savings Estimate – but now what? In case you're wondering where to start, here's how to read your MHM Estimate:

Page 1

1. Make sure your name is correct.
2. Now, let's check out the blue and orange bar graph.
 - a. The bars compare how much money each plan would save you compared to the most expensive plan. The orange bar represents your current plan.
 - b. The plan in last place, with a \$0 next to it, is the plan that has the least savings and would cost you the most money based on your projected medical utilization.
 - c. Now look to see where your current plan stacks up: Are you already in the plan at #1? Congratulations, you are in the plan that will save you the most money! If you are not already in plan #1, check out how much money you could save by switching to the plan ranked #1.
3. If the top ranked plan is an HSA eligible plan, we've done a few calculations to give you an idea of how much more money you can save if you contribute. These calculations can be seen in the dark blue box at the lower left.

MyHealthMath®

**Kermit TheFrog's
Comparative Savings Estimate**

Which plan could save you the most money next year?

Savings Comparison of Your Plan Options Based on the Projected Medical Use You Reported to an MHM Analyst on October 1, 2020

How did we calculate these estimated savings?

We compared the Total Cost for each plan option based on the projected medical use for you and your family members. The plan with the most savings and the lowest Total Cost is at the top.

MAXIMIZE YOUR SAVINGS

Under an HSA-eligible plan, you can save even more by making tax-free contributions to an HSA to help pay for qualified medical expenses.

If you enroll in the HSA 2700 (the top-ranked HSA-eligible plan on your report), consider contributing at least \$3,600 to an HSA for an additional \$972* in tax savings!

You can also generate tax savings if you contribute to a Flexible Spending Account (FSA) if your employer offers one. Learn more [HERE](#).

*Based on a tax rate of 27%.

Example

In this example, Kermit TheFrog is in Plan #3 (HSA 5000). Kermit has a choice to make...

- If he makes no changes, he would save about \$652 more than if they were to choose the lowest ranked plan (PPO 500).
- If he switches to his #1 ranked plan (HSA 2700), he could save \$1,408 more ($\$2,060 - \$652 = \$1,408$).

How to Read Your Comparative Savings Estimate from MyHealthMath

Page 2

4. The “Plan Overview” section will provide you with an outline of the key details of each plan being offered to you. Your plans are ordered here with your most optimal plan located on the left and the least optimal plan located on the right.
5. The “Financial Overview” section will break down the total cost that is generated for each plan at a higher level of detail so that you can better understand your report. Furthermore, it will outline any employer HSA or HRA contributions/reimbursements and HSA tax savings from your personal contribution.
6. The word bank at the bottom may be used as a resource to guide your through the report. It can help clarify any unfamiliar terms that you come across.

JANUARY 1, 2021 PLAN OVERVIEW

IN-NETWORK ONLY	HSA 2700	HSA 3500	HSA 5000	PPO 550
Deductible (individual / family)	\$2,700 / \$5,400	\$3,500 / \$7,000	\$5,000 / \$10,000	\$500 / \$1,000
Out-of-Pocket Limit (individual / family)	\$2,700 / \$5,400	\$6,000 / \$12,000	\$6,550 / \$13,100	\$2,500 / \$5,000
Coinsurance Rate	0%	20%	20%	20%
Need referral from PCP to see specialist?	no	no	no	no
Max Employer HRA Reimbursement	x	x	x	x

FINANCIAL OVERVIEW

IN-NETWORK ONLY	HSA 2700	HSA 3500	HSA 5000	PPO 550
Your Annual Premium	x	x	x	x
Your Out-of-Pocket Medical Expenses	x	x	x	x
Your Net Out-of-Pocket Costs	x	x	x	x
Your Total Cost	x	x	x	x
Worst Case Scenario	x	x	x	x
Your Employer HRA Reimbursement	x	x	x	x
Your Employer HSA Contribution	x	x	x	x
Your Personal HSA Contribution	x	x	x	x
Estimated HSA Tax Savings	x	x	x	x

Note: If your employer offers an FSA, your contributions to an FSA when enrolled in a non-HSA eligible plan would also generate tax savings!

TOTAL COST:

= your premium + any net out of pocket amounts.
Net out of pocket = out of pocket medical expenses - employer HRA or HSA contributions - any tax savings from your personal HSA contributions.

DEDUCTIBLE:

The amount you pay for covered health care services before your insurance plan starts to pay. After you have "satisfied" the deductible, you usually pay either a copay or coinsurance for covered services.

COINSURANCE:

The percentage of costs of a covered service you pay, usually after your deductible is met.

WORST CASE SCENARIO:

This represents the maximum you would have to pay for in-network medical services under each plan should you have unexpected medical expenses like an emergency, accident or unexpected medical condition. We add your premium to the out of pocket limit minus any HRA or HSA contributions.

OUT OF POCKET LIMIT:

This is the most you have to pay for covered services in a plan year. After you spend this amount on deductibles, copays, and coinsurance, the plan pays 100% of the cost for covered services.

Assumptions: This comparative savings estimate is based on the utilization you provided to MyHealthMath. We applied these costs to all of the plans that your employer is offering for the upcoming plan year. This comparison is based on the following key assumptions: 1) All services in the upcoming plan year will be with in-network providers; 2) All services will start and end in the same coverage period; 3) Some of the insurance plans available to you for next year may have a limited number of visits for copays, after which coinsurance applies (which could increase your cost), and some plans may have "Chronic Illness Support" with a waiver of deductible and more favorable coinsurance (which could reduce your cost); 4) Prescription drug tiers are determined by the drug formulary provided by the employer.

Disclaimer: This report includes general information and calculations regarding medical and pharmaceutical charges based on reported usage and is intended to provide assistance with decisions about health insurance plan choices for the upcoming plan year. Consider that your medical and pharmaceutical needs in the upcoming plan year could differ from your reported usage. This report is for informational purposes only and may not reflect all of the pricing factors and variables for all circumstances in the coming year. This report and any accompanying information or materials, written or verbal, are not intended, and must not be taken as professional advice or recommendations. Professional advice on specific insurance and benefits can be obtained by contacting a duly licensed professional. While the figures and analyses of plans to be offered herein are believed to be accurate, the medical and pharmaceutical costs in the upcoming year may vary dramatically from historical costs, so they are not warranted to be correct, and MyHealthMath, Inc. disclaims any and all warranties of any type and shall have no liability for any inaccuracy or incompleteness.
