# Grando Condor

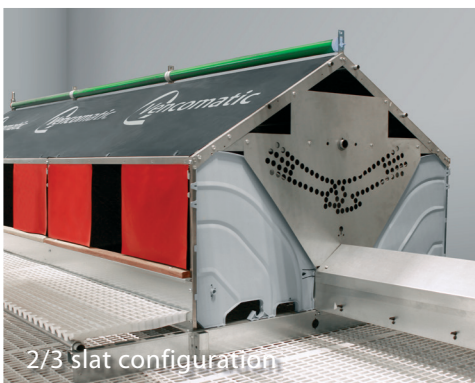

## Winchable nest system for broiler breeders

Winchable nest

Optimal bird performance

2/3 slat configuration

The Grando Condor is the winchable nest system for broiler breeder housing. This nest is especially developed for hot, severe climate conditions. Its' strong solid construction and choice of materials together with the unique features of a Vencomatic nest ensure optimal hatching egg quality.

The Grando Condor suits both natural and tunnel ventilated houses. The lay-out is comparable to a layout for manual nest boxes. It exists of two rows of nest-blocks and walkovers. The change from manual to automatic egg collecting system will be a small change in management. The winchable nesting system facilitates bird training and cleaning of the house and nesting system in between rounds. All these features result in better economic performances and lower operational costs.

### Grando Condor

- Ideal for 2/3 slat configuration
- Suitable for hot climates
- 2 Row nest configuration
- Clean and top quality hatching eggs
- Automatic egg collection
- Optimal bird performance
- Low operational costs

### Standard features

- Tilting nest floor for a daily clean Vencomat
- Vencomat with mat clip for easy assembling and cleaning
- Winchable nesting system
- Strong walkovers of 3 meters length with removable steel cover
- Plastic slats for easy nest entrance and optimal hygiene
- Automatic egg belt and nest floor closing system

### Options and possibilities

- Manual or automatic winching system
- Connection with Vencobelt for central egg collection
