

DOMINION VUE
The Dealer's Cloud-Native DMS

It's Time to Break Free

Running a dealership is more complex than ever before, but Dominion DMS' new cloud-native dealer management system solution, VUE, is designed with your future in mind. Leveraging decades of experience serving dealerships just like yours, our DMS provides the security, mobility and efficiency that you need to deliver a superior buying experience, reduce costs and protect your business – no matter what tomorrow brings.

Have confidence that your dealership is running smoothly with a modern solution that's built for today and designed for the future.

Secure

Achieve peace of mind. Built on Microsoft Azure Cloud, Dominion VUE is an inherently secure, stable platform. Say goodbye to disruptive and slow server updates, as our updates can be immediately implemented. This ensures minimal impact to operations, reduces risks of new threats and enforces compliance with changing regulations.

Efficient

Get more done in less time. Deliver a better user experience and maximize your dealership's human capital to drive higher productivity and profits. Ensure data accuracy across all modules with real-time transmissions, not just once a day. An intuitive user interface lets your team get quickly trained and ready to go.

Mobile

Experience the freedom of mobility. Access your dealership's information anywhere, giving you the flexibility to choose how business operates and quickly adapt. Having no VPN requirements can open new ways of working in an increasingly digital-focused market – from employees telecommuting to offsite customer service.

DRIVE BUSINESS CONTINUITY AND PROFITS

Dominion DMS partners with dealers in an ever-evolving landscape to help you manage your dealership today and tomorrow. As a true cloud-native DMS built from the ground up by a company with decades of automotive experience, VUE provides the security, mobility and efficiency that enables you to drive business continuity and maximize profits.

Accounting

Keep track of every asset and liability coming in and out of the dealership with a single source of truth. Data across all modules are linked, eliminating the need to manually re-enter data while ensuring that the numbers are accurate. The permissions feature makes it easy to control or modify who can see what, ensuring secure and proper access to sensitive information. Hyperlinks within Journals allow for quick access to specific items including repair orders, part invoices, deals, vehicle records, customer records and vendor records – all without losing your place. Scheduled Reconciliation lets you remove small amounts before focusing on larger ones, reducing time spent on reconciliations.

Sales

Make a vehicle sale process more efficient for a superior customer experience. Seamlessly transition customers from sales to F&I without manually re-entering their information. Easily identify what forms need to be signed and automatically flags missing items to prevent issues further in the process. Access multiple scenarios on a single sales desk to quickly provide quotes on different vehicles and deal types in minutes.

Integrations

Maximize the value of your DMS with seamless integrations to more than 75 third party applications. Easily connect with specific solutions for bi-directional communications, ensuring accurate and timely data exchanges across the enterprise.

Reporting and Management

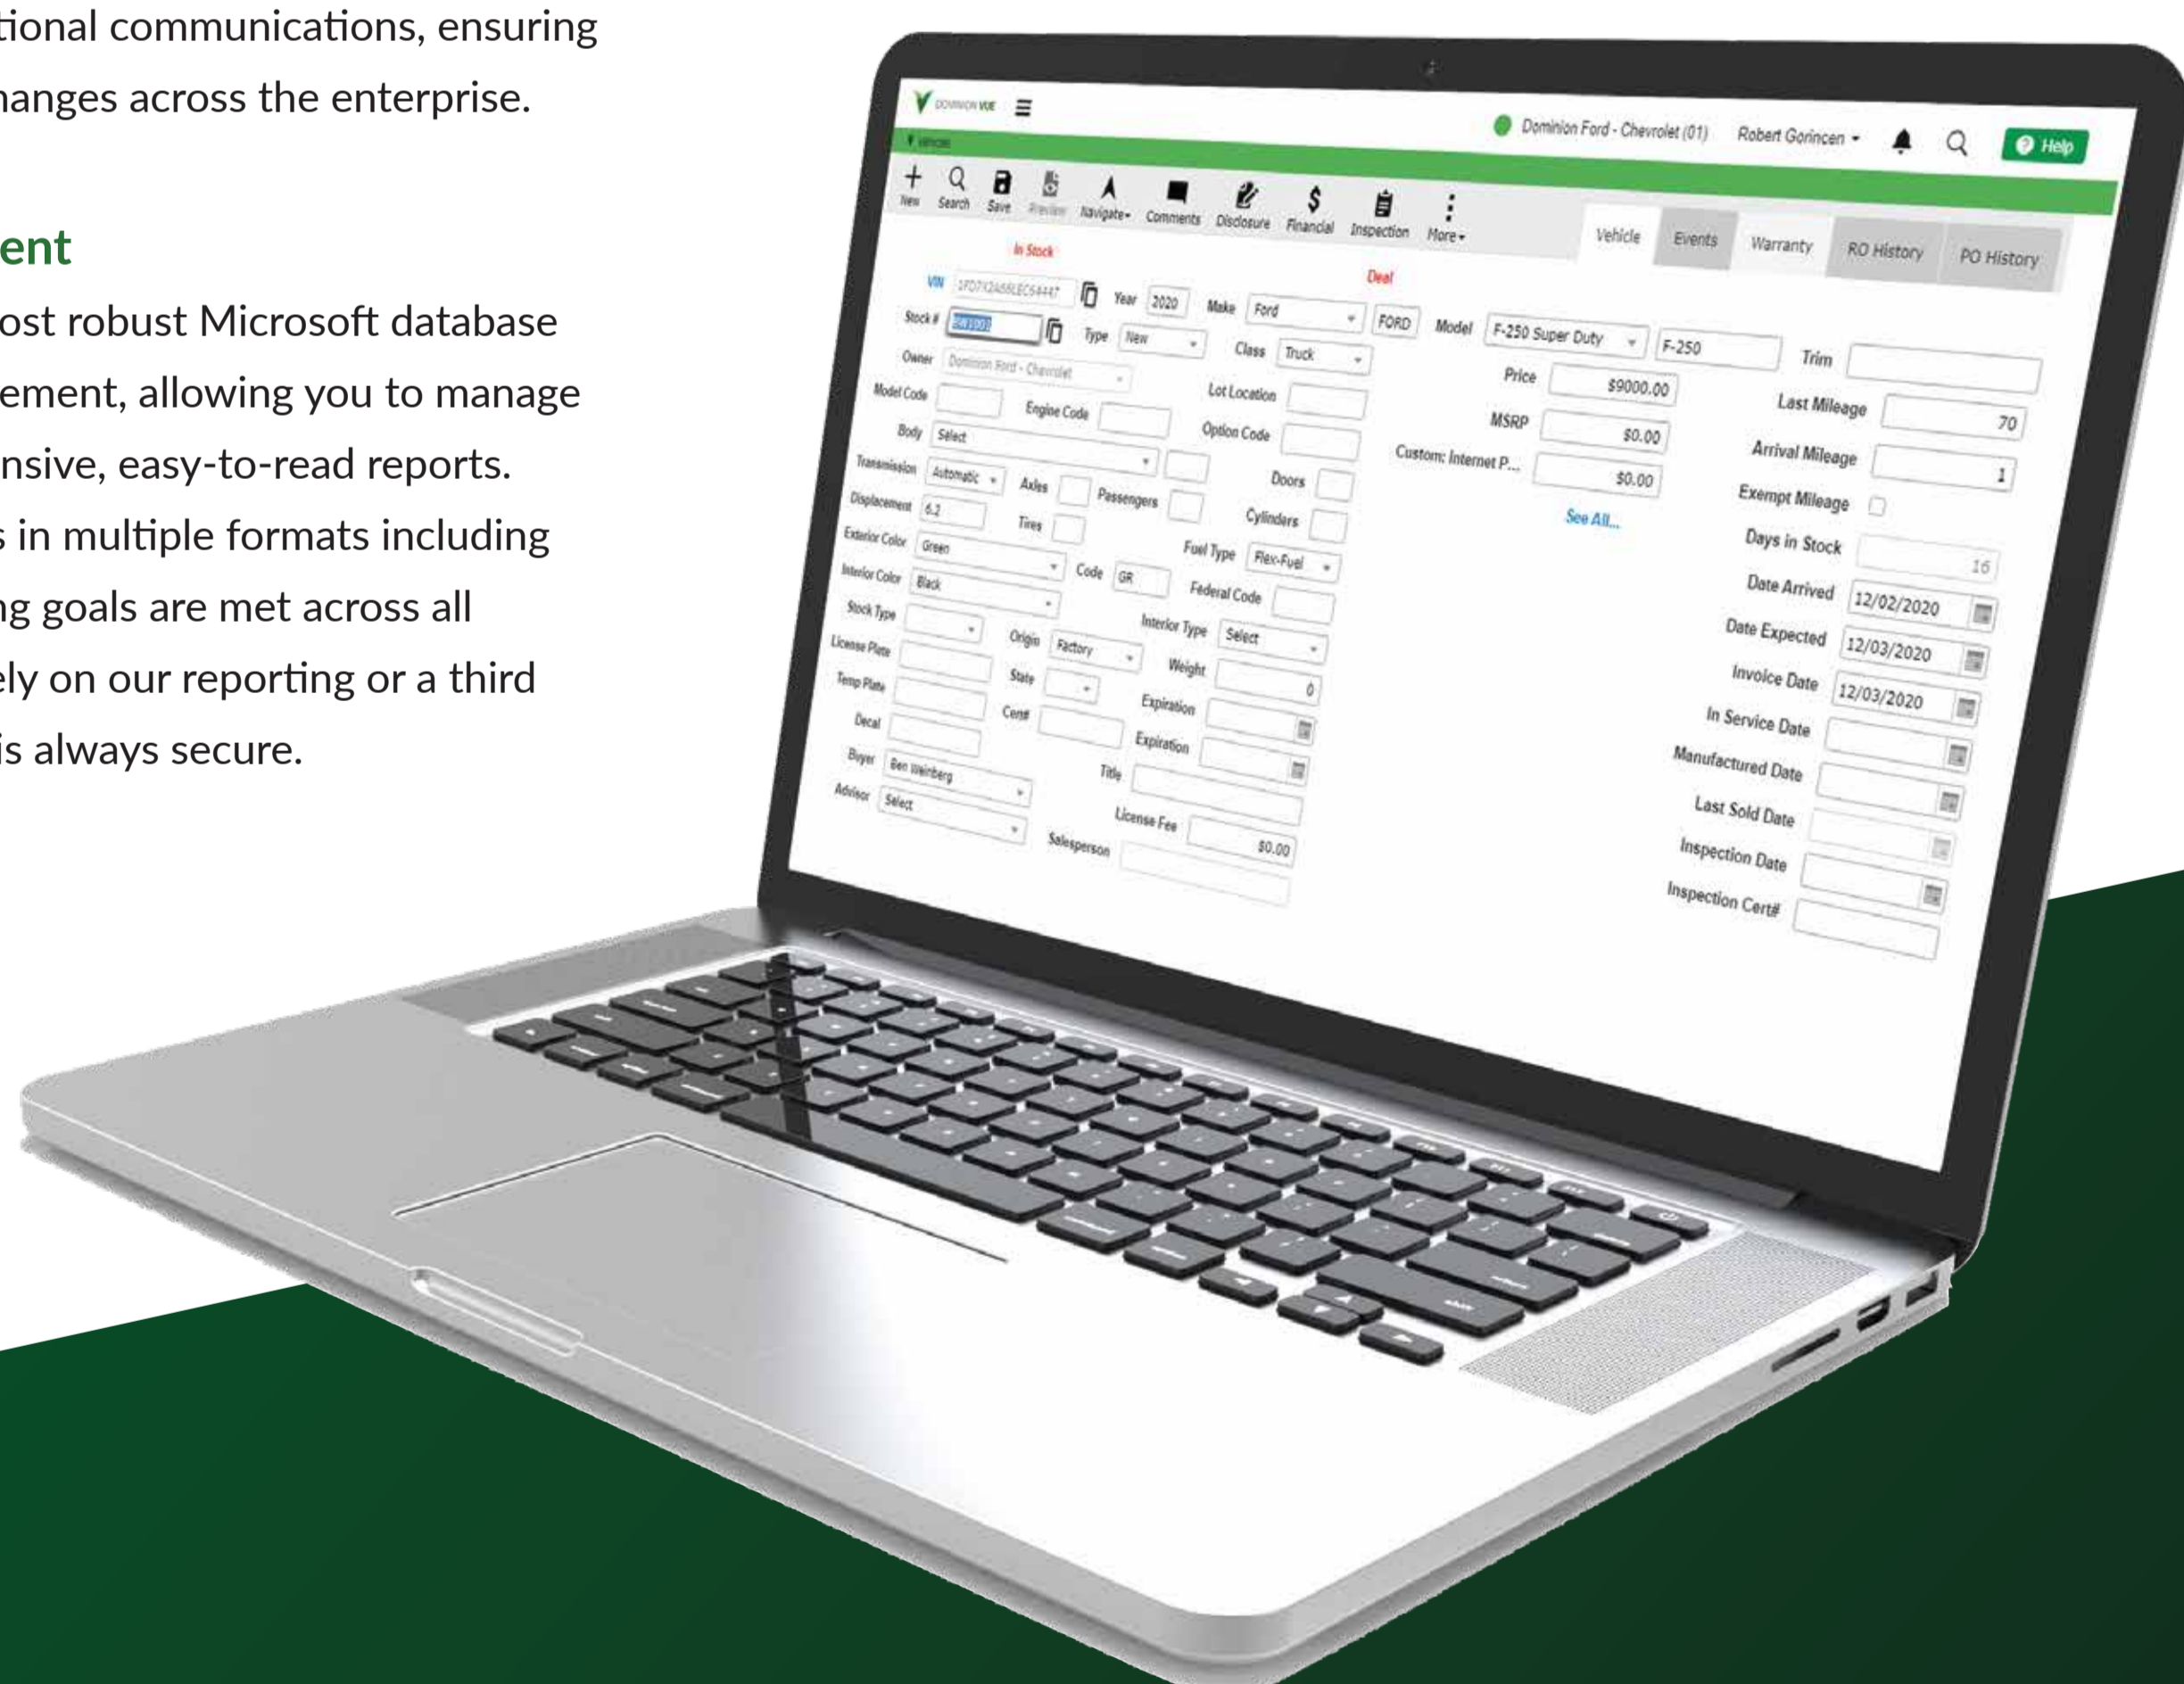

VUE is built on Sequel, the most robust Microsoft database for reporting and data management, allowing you to manage your business with comprehensive, easy-to-read reports. Download and export reports in multiple formats including Word, PDF and Excel, ensuring goals are met across all departments. Whether you rely on our reporting or a third party, rest assured your data is always secure.

Parts

Improve inventory management in the parts department. Technicians can request parts they need directly from their workstation, and the back counter can digitally fulfill them, so everyone can focus on the job without having to walk back and forth. Built-in Team Chat allows the back counter to communicate directly with repair order advisors and technicians. Quotes, invoices, parts and special orders can all be created from the same Parts Desk screen, which encompasses most of the parts counter person's daily job functions.

Service

Efficiently transition a new sale into a service customer to maximize revenue. Real time interface with accounting automatically provides repair order (RO) information. The SignalR feature lets multiple users access and edit the RO simultaneously, reducing risks of duplicating data. Communicate with other employees through Team Chat without leaving the workstation. Easily store attachments such as invoices and damaged vehicle pictures taken from the Technician System. Keep customers updated on service status with two-way messaging, including images, which are automatically saved to the RO history. The Cashier feature allows for secure virtual payments, so customers can skip the cashier line during vehicle pickup.

A DIFFERENT VUE

Traditional DMS solutions are server based and repurposed for the cloud. This can result in limited features, such as scalability issues and security risks. VUE, on the other hand, is a cloud-native DMS built entirely from the ground up. See how we're different.

Features	Dominion VUE Cloud-Native DMS	Traditional or On Premise DMS Systems
Infrastructure	No onsite infrastructure, removing need for IT team and maintenance	Onsite servers are required, taking up dealership space
Capacity	Scales up automatically during peak hours to meet capacity needs	Built for the perceived worst case scenario and cannot scale beyond that without expensive upgrades
Delivery	Software updates are implemented immediately	Server updates require application changes and longer test cycles
Recovery	Rapid response for native, automatic disaster recovery	Need hours/days of prep time to handle disaster recovery and servers at other locations
Geographic Reach	Leverage the closest data center for faster service and optimal performance	Dependent on server location, which can impact performance speed
Accessibility	Web based application that can be accessed anywhere without a VPN	A VPN is required to access server, limiting off site and remote connection
