

SAFELY & CORRECTLY REPAIR INTELLIGENT VEHICLE TECHNOLOGIES AFFECTED BY COLLISION

Pre & Post Repair Scanning

Self directed aftermarket QuickScan™ or OEM-validated remote scanning performed by our factory trained technicians on all major US, Asian and European vehicle brands. After each OEM scan, get a live technician to help explain the results and next-steps for the vehicle repair.

CCC ONE® Software Integration

Save time per repair with a direct integration to CCC ONE. Scan reports and invoices feed directly into the vehicle's work file so they can be sent directly to Allstate. Invoice delivery requires CCC® Repair Workflow shop management.

Remote Technical Support

Live repair guidance from 100+ OE-trained brand-specific Master Technicians who can remote directly into the vehicle and provide repair assistance.

Remote Assisted Programming & ADAS Calibrations

Hassle-free remote-assisted flash programming for both ECU replacement and reprogramming. ADAS calibration and component initialization are easy to verify and perform at your shop.
