

# SAFE SPACE

## WEARABLE SOCIAL DISTANCING TECHNOLOGY

Safe Space is the world's most accurate wearable distancing and contact tracing solution. Re-purposing cutting-edge technology previously deployed by ZeroKey in enterprise and industrial sectors prior to the COVID-19 pandemic, this core technology enables precise device-to-device passive distance monitoring accurate down to the millimetre.

## KEEP EMPLOYEES SAFE & BUSINESSES OPERATIONAL

When Safe Space devices become closer than a configurable minimum distance, such as 6 feet or 2 metres, the devices alert the users through a vibration and audible beep.

Optionally, distance measurements can be sent securely using highgrade encryption to an on-premises or in-cloud contact tracing service. If a case of COVID-19 is subsequently detected, contact tracing reports are automatically generated to provide a list of employees recently in close proximity to the infected person.

## FEATURES

- Enterprise-grade solution
- Social distancing compliance
- Strict privacy controls
- Azure AD/AD FS integration
- Contact tracing
- Helps prevent facility-wide closure
- Rugged and waterproof design
- 100x more accurate than Bluetooth
