

Keep the flexibility, but lose the fatigue.

InSpace is a video conferencing platform built by educators for educators. Our research-informed design yields highly engaging learning experiences that honor the human presence of teachers and learners who enjoy the freedom to move around the screen, to join side conversations, to enter and leave visually-connected breakout rooms at any time, and to collaborate virtually with peers.

Built for teaching and learning.

You told us what you wanted; we built it. With InSpace, you can do everything in a virtual classroom that you would do in a physical classroom.

InSpace is secure, accessible, and simple.

At InSpace, we take privacy and security seriously. We have received a passing report for SOC2 Type I, and are obtaining our Type II. We are FERPA and COPPA compliant, and we only collect personal data when necessary.

The InSpace platform conforms with WCAG 2.0 and 2.1 AA standards, and we're working to go above and beyond to ensure an accessible and seamless experience for all.

InSpace is browser-based and requires no installation. Our seamless integration with Canvas keeps things simple, so you can spend your time on teaching.

Note: InSpace has a new look, but we're still the same amazing product.

Accessibility is at our core.

We'll get straight to the point:

InSpace meets WCAG 2.0 AA, WCAG 2.1 AA and Section 508 standards.

The InSpace platform has been audited by David Berman, a leading accessibility expert to obtain certification. David and his team tested InSpace against all of the standards independently, and they also enlisted individuals requiring assistive technologies and/or modifications to ensure that we weren't just meeting the bar, but that it was a positive user experience. One tester, blind since birth, proclaimed, "I really like this thing! It's really good!"

Accessibility Features

We're proud of designing InSpace with accessibility at its core – it's allowed us to innovate in new and exciting ways. These are just some of the unique features that InSpace has to offer.

Offer Assistance

Any participants can offer or request help from another participant. Once both parties confirm, they are virtually tethered together to move about the space with a guide. With this, the tethered participants can have a shared experience.

Movement on Command

You are free to move independently throughout a space at any time with either your mouse or your arrow keys, but we've also included notifications that when acknowledged will push you to the determined location. This makes hopping into a seat in the presentation room, or over to breakout room 3 a breeze.

Personalization

Hosts can change background images with two clicks! You can use something from the InSpace gallery, or upload your own. This allows you to use backgrounds with appropriate contrast and ones that best suit the needs of your participants.

Captioning Integration

The host is able to assign a participant to provide live captioning during a meeting, but we've also incorporated an integration with StreamText, so that if an individual uses StreamText with a preferred captioner, they have that as an option as well.

InSpace is a video conferencing platform built by educators. Our research-informed design celebrates authentic human presence in online learning by cultivating the freedom to move, to engage within visually-connected breakout rooms, and to collaborate meaningfully with peers.

Your Security - Our Promise

At InSpace, we're in the business of providing an innovative video conferencing and collaboration tool for the classroom, and that means that we're in the business of protecting you and your data.

We take your privacy and security seriously, which is why we:

- engage in an annual SOC2 Type II audit
- conduct penetration testing with a trusted vendor
- have engineers dedicated to our security efforts
- require all employees to complete background checks
- require all employees to complete annual cyber security training
- require all employees to review and acknowledge our Employee and Business Policies
- have an incident response plan, and complete practice exercises
- have a disaster recovery plan, and complete practice exercises
- have a staging and production environment
- have end-to-end encryption for all data
- collect only the data that is necessary for InSpace or its 3rd Party Vendors
- conduct security audits on all 3rd Party Vendors
- leverage IPass and a mobile device management plan for our machines
- comply with all applicable data and privacy laws and regulations (e.g. GDPR, COPPA, FERPA)

InSpace was granted a SOC2 Type I report in July 2021 that acknowledges all of InSpace's security controls as passing. We will have our SOC2 Type II report this fall. HECVAT (Full and Lite available upon request: support@inspace.chat)
