ELECTRIFICATION BEYOND THE GRID

Drake Talks CES 2021

Jan 13, 2021

Retail players, including oil & gas majors, are in a land grab to unlock the value of the EV ecosystem

but this causes strain on the grid and requires major infrastructure investment.

FreeWire's breakthrough tech enables scalable ultrafast charging

The FreeWire Boost Charger is a battery-integrated ultrafast charger that leverages advanced technology to boost power at the grid edge – **significantly reducing installation & infrastructure costs by an order of magnitude.**

120kW ultrafast charging, works with all EVs, with internal power sharing to charge 2 cars at once

160kWh lithium-ion energy storage boosts power from the grid to EVs

Compatible with low-voltage grid connections, mitigating cost-intensive grid infrastructure upgrades

Solving the biggest pain points of ultrafast charging infrastructure

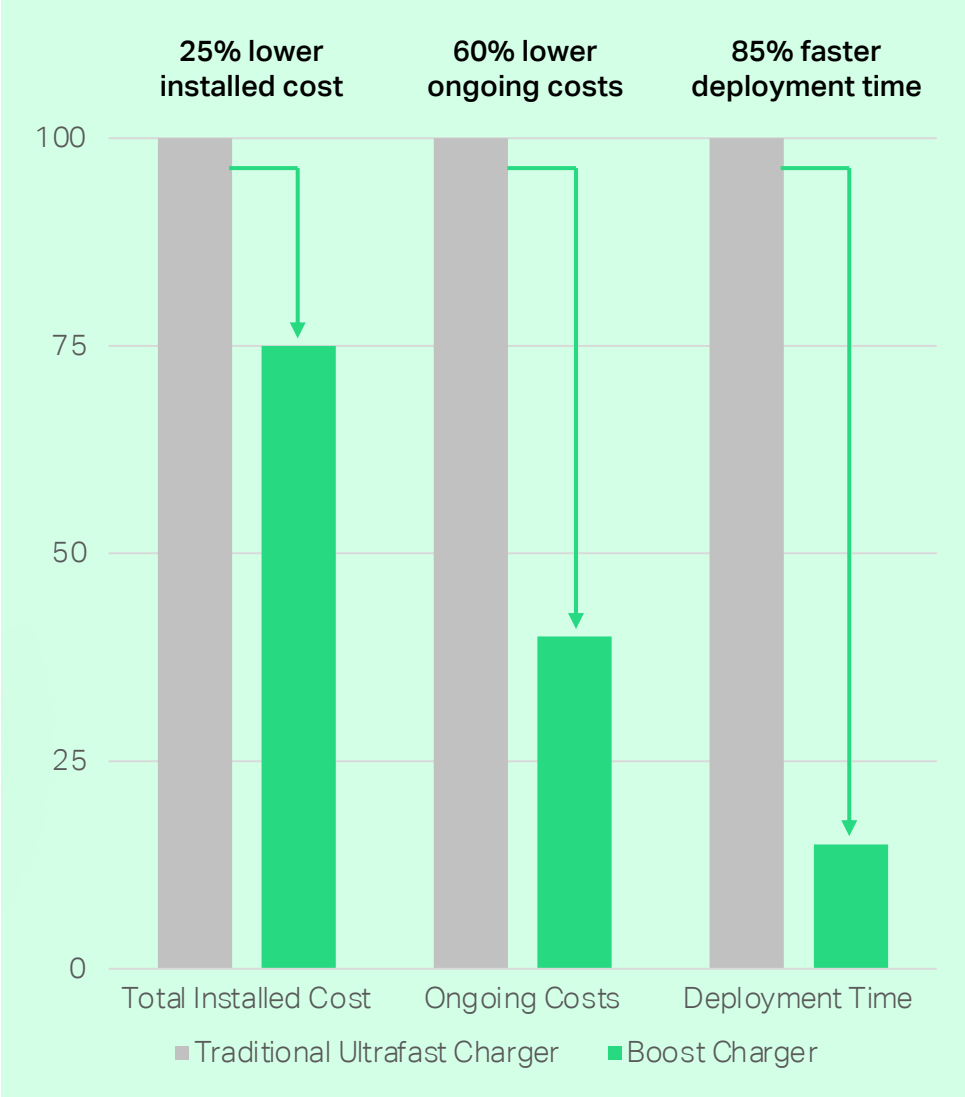

Grid Impact

Boost Charger requires the same infrastructure and has the same grid impact of a Tesla destination charger.

Charging Experience

But it enables the ultrafast charging speeds and driver experience of a Supercharger, all while providing a distributed energy resource to utility partners.

And we've secured the biggest EV charging contract in history
