

# Azalea Health Mobile Solutions for Physicians

## Reduce Burnout with Mobile Productivity Applications

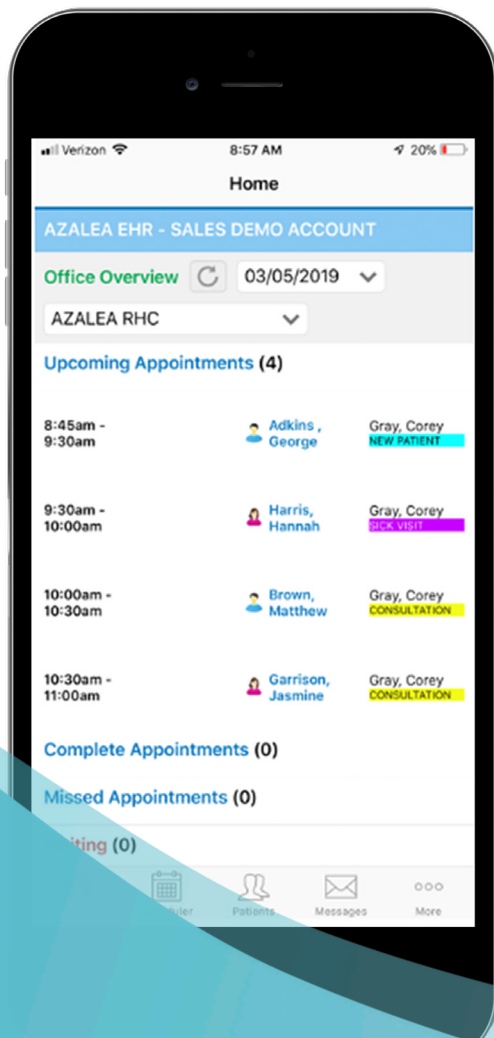

**Problem:** The average physician logs 1.4 hours per day in the EHR after clinic hours<sup>1</sup> thanks to inefficient workflows and excessive documentation requirements.

**Solution:** Mobile applications can empower physicians to quickly and conveniently log information in the EHR. Azalea Health and our integrated partners have enabled caregivers to be on the go with the following mobile applications.

### Azalea MyPractice Mobile Application for Physicians

Designed for Android and iOS devices, Azalea makes it easy to:

- View your patient appointment schedule
- View key clinical data, such as allergies and medication before calling in a prescription
- Document patient encounters
- Conduct a telehealth visit with a patient
- Capture charges in a timely manner even when on the go
- Securely communicate with other careteam members

Seamlessly integrated with the Azalea PM and EHR, the data you view and capture on your mobile device is updated in real-time and consistent across your desktop and mobile platforms. Azalea's MyPractice application helps you improve the patient experience and practice financials. No more lost charges, less screen time with the computer, and more face to face time with your patients.

## iPrescribe, powered by DrFirst

Integrated directly with Azalea's ambulatory EHR and free to Azalea users, iPrescribe makes writing and refilling prescription medications on the go easy. With DrFirst's iPrescribe application, physicians can:

- Prescribe any drug from anywhere with just a few taps on the mobile device
- Minimize typing by selecting commonly prescribed drugs
- View out-of-pocket costs for drugs based on the patient's insurance with real-time benefit information

“Our physicians love the Azalea MyPractice App. They are always moving between multiple clinic locations and the hospital. Being able to have their primary interaction with the EHR be on the phone is critical to their success. It also allows them to communicate with staff and nurses so they never miss a beat when it comes to providing high quality patient care.”
