

Azalea Health Prior Authorization Services

Maximize productivity. Minimize denials.

Physicians and staff spend 20.4 hours per week on prior authorizations,¹ and that number will continue to rise as the number of procedures, prescriptions, and therapies requiring prior authorizations increases. What would you do with those hours back in your week?

Azalea Prior Authorization Services give you time back in your day to focus on what matters most. Acting as an extension of your facility, the Azalea Health Prior Authorization team actively works and follows-up on all prior authorizations. Our secure, web-based portal, makes initiating and monitoring prior authorizations simple while providing you complete transparency into the status of the prior authorization process. By streamlining your prior authorization process with Azalea Health, you can take back the time you spend on the phone with insurance companies all while maximizing your reimbursement and reducing denials.

Reduce Denials

Ensure all procedures that require a prior authorization are done in a timely manner and documentation is submitted with the insurance claim.

Eliminate Hassles

A simplified workflow and single-screen dashboard eliminates the need for clunky spreadsheets. From one screen, quickly view prior authorizations and their status, allowing you to focus on what needs to be worked instead of spending time looking up the status for each transaction.

Integrate Workflows

For those using Azalea EHR, drag and drop an authorization to an encounter from the Scheduler, and link appointments to approved authorizations. Integrated workflows save your staff time and frustrations from having to find the authorization documentation and attach it to the claim.

Total Transparency

By enabling notifications, you are alerted when there is a change in your prior authorization status. You can also track and catalogue requests from a centralized management dashboard.

Increase Productivity

Reduce hours of frustrating phone time contacting insurance providers enabling your resources to complete other high priority tasks.
