| Monthly notice without minimum term       | ✓    | ✗             |

In care, communication takes place via several channels: email, phone, paper or direct conversations. In addition, care software also occasionally offers messenger functionalities. For users, communicating via multiple channels and with complicated solutions is stressful and error-prone.

## **Communication in care needs a stand-alone solution.**

No matter what you choose: communication must be the primary use case. The software or app must be easy to use, reliable and secure. The information must be available in the right place at the right time for the right people. It must be usable without training and work the way you expect it to, no matter what device you use.

**Welcome to nooa.**
