# Prophet | BAXTER PLANNING

Balancing rising service expectations with internal cost pressures and changing products, parts, and customers is a challenge.

There's only so much you can do with spreadsheets and manual processes.

Our software and planning services automate the planning process to deliver the highest possible service levels at the lowest possible costs.

For every part at every location

- **Leverage** installed base and demand history to create an accurate & flexible demand forecast.

- **Balance** service level agreements, part chaining, and cost factors to set cost-optimized target stocking levels.

- **Automate** the replenishment and ordering process to maintain stocking targets without manual processes.

- **Model & visualize** changes to the plan while automatically identifying root causes and corrective actions anytime the right part is not in the right place.

Suppliers & Repair Centers

Purchase & Repair Planning

Distribution Centers

Reverse Logistics
Returns Forecasting
Scrap/Yield Calculation

Prioritized, Cost Optimized Redeployment

Prioritized, Cost Optimized Replenishment

Forward Stocking Locations, Depots, Smart Lockers

Synchronized Forward Stocking & Technician Inventory

Technician-Held Inventory

Customer Installed Base

Software built and supported by service parts professionals

Our experienced team provides proactive support through a prescribed set of analysis, actions, and business reviews to drive continuous improvement for our customers.

PaaS can supplement your team with a Planner to help with:

 Varying Service Level Agreements

 Complex, Multi-Echelon Networks

 Varying Demand Patterns

 Reverse Logistics & Repair for Defective Material

 Varying Lead Times & Part Costs

 Part Chaining, New Product Introduction, End-of-Life

Added expertise allows you to overcome key challenges:

- The service organization is pulled in many directions and lacks the time and focus requried for parts planning.

- Individuals with the required experience and analytics skills are difficult to recruit, train, and retain.

- Changes in service expectations, products, installed base, logistics networks, and planning solutions can disrupt business processes and results.

Results you can expect when working with Baxter Planning:

 Increased Service Levels
Increased Planner Productivity
Increased Customer Satisfaction

 Reduced Inventory
Reduced Expedited Shipments
Reduced Technician Visits
