

Helping you master your lab data

Improved oversight with your lab data now in full view

A great deal of clinical trial data needed to support NDA submission comes from your laboratories. How you manage the complexity and quantity of that data can make the difference in how quickly your products safely proceed through development and approval – and into the hands of patients who need them.

At Q² Solutions, we are singularly focused on delivering top-quality services and innovations that transform science and data into actionable medical insights. Access to the advanced analytics and reporting of the IQVIA Clinical Analytics platform means you'll be

able to see your trial lab data at a deeper level – allowing you to quickly make important connections and proactively address issues to improve the quality of your studies and optimize drug, medical device and diagnostic development outcomes.

Innovative solutions

Informative and intuitive visualizations, continually shaped by ongoing market research and customer feedback, enable an optimal user experience and fast decision making

Critical data

With near-real-time access to critical data from multiple sources – all in one place – you can quickly and easily identify trends that may impact data quality and patient safety

Trial insights

Meaningful insights and confident decisions in your ongoing trials help assure quality, submission-ready data at trial close, and can also inform your direction in future trial design

See more to do more with IQVIA Clinical Analytics

24/7 near-real-time access to metrics

- Enhanced oversight so you can spot and act on trends – and identify risks before they become problems

Streamlined **COMMUNICATIONS** with investigator sites

- Simplified tools for investigators and coordinators provide increased efficiency for sites, and easier monitoring and site management for trial teams

GREATER VISIBILITY into lab data

- More effective trial performance measurement
- The ability to optimize how you conduct your current trial and how you design future protocols

Get timely insights to better manage your clinical trials

Subject-level lab values over time, across an entire trial

Tests performed, alerts and cancellations – all in one place

Query rates, response rates and closure rates, evaluated across multiple criteria

Up-to-date sample location information, shipping patterns and sample integrity data in a single view

Data analytics you can act on

The intuitive reporting capabilities of **IQVIA Clinical Analytics** reduce manual data compilation and its associated errors while enhancing your ability to construct reports from multiple data sources.

This puts real-time, high quality laboratory data at the fingertips of your project managers, medical monitors and clinical research associates.

Analyze your trials with these views to drive better decisions

Lab Data Review	Data Query Analysis	Lab Sample Tracking
<ul style="list-style-type: none">• Access program-level overview of trial activity• Trend patient safety data• Test cancellations• Complete a cumulative analysis of lab results	<ul style="list-style-type: none">• Efficiently track investigator site query response and closure times by trending queries across functions and trials	<ul style="list-style-type: none">• Follow your samples as they're shipped and received between sites and the lab• See site shipping trends• Identify sites that are not in compliance with shipping requirements

Increase productivity and streamline laboratory management for sites

Simplify how your sites manage lab materials, respond to queries and track samples through **Infosario Site Gateway**, an award-winning online workspace. Interactive, easy-to-use tools can help your sites:

- Optimize lab kit materials management with electronic kit resupply
- Receive and respond to queries electronically, eliminating time-intensive phone calls and faxes
- Complete requisitions electronically – virtually eliminating queries
- Assign samples to air waybills, track sample receipts and obtain reports in a single online location, enabling faster decision-making

High quality data and meaningful insights lead to quicker actions and confident decisions

When it comes to central lab performance, you expect speed and accuracy – and the ability to access and analyze your critical lab data. That's what you get with the IQVIA Clinical Analytics platform.
