Denovo completes 380th successful Managed Disaster Recovery (MDR) test

BOULDER, CO | December 13, 2018

Denovo recently completed its 380th successful Managed Disaster Recovery ("MDR") test. Customers can purchase MDR as a stand-alone service, or bundled with Denovo's public or private cloud hosting and/or application managed services. Denovo specializes in providing Managed Disaster Recovery for companies that run their business with Oracle JD Edwards (JDE) and Oracle e-Business Suite (EBS).

Studies have estimated that downtime costs companies between $90,000 and $500,000 per hour. Yet industry analysts estimate that only 35 percent of small and medium sized businesses have a comprehensive disaster recovery plan in place.

Executives now more than ever, realize that no business is immune to a disaster, outage or extended downtime. They need to demonstrate a proactive due diligence, compliance and have competitive standing. They know that the risk of not having a plan in place could cost them astronomically if a disaster does occur.
Richard Dolewski, GM Managed Disaster Recovery, Denovo

Denovo provides an "Application Ready" recovery including all complimentary software (Windows, Linux, AIX, DB2, SQL ORACLE) following a trade-secret, proven repeatable methodology. Furthermore, Denovo can assist in your planning and has authored over 50 Disaster Recovery Plans.

We moved away from a failing DR company, where the tests were failing and the costs were huge. With data being one of the most important assets we have as a company, Denovo helped us put a plan in place that would limit the loss of data in the event a disaster were to happen. The repeatable failover processes and testing that we have put in place with Denovo are top notch. It has been a good partnership and a really easy process and we know that we are covered in case something does happen."
David Lyle, CIO, Carolina Biological

Denovo's methodology uses four distinct Phases within the initial 60 days of engagement including detailed documentation, and updates to the customer run book documented through the recovery test.

- Phase 1: Replication/Monitoring Implementation
- Phase 2: Initial Recovery Test
- Phase 3: Every-Ready State
- Phase 4: Recovery Test

6400 Lookout Road, Suite 101, Boulder, CO 80301

ORACLE **Platinum Partner** Cloud Select North America

Denovo develops Customer Disaster Recovery Run Books that document:

- Who will be responsible to recover servers/applications
- What critical applications/interfaces failover/recovered and verified
- Where they will be recovered
- How they will failover or be recovered
- When services are available
- How measurable metrics are documents in service level agreements
